DRAFT

Dear Peter Arnold:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (732) 414-2720 or gbelli@aeiconsultants.com.

Sincerely,
DRAFT
Eugene A. Belli, REPA, CHMM
Executive Vice President
AEI Consultants

Project Summary

200 North College Street, Charlotte, Mecklenburg County, North Carolina 28202

Footnotes	
Recognized Environmental Condition	AEI's research revealed that the subject property, specifically the current vacant unit along College Street, was formerly occupied by a dry cleaning business. According to available information including city directories, Juns Cleaners and then AJ Cleaners occupied this unit from approximately 1989 to 2020. Based on a review of the NC Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Compliance Program, Jun's Dry Cleaners is classified as a petroleum, dry cleaner facility, which had been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant with documented perchloroethylene use during that time. In 2003, Mr. Park reportedly installed a new dry-to-dry Realstar petroleum solvent dry-cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to a Genesis III hydrocarbon machine. Dry cleaning operations that utilize perc/chlorinated solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. In addition, there is a potential for hazardous vapors to migrate through the slab and into the indoor air of the facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a REC.
Controlled Recognized Environmental Condition	None identified.
Historical Recognized Environmental Condition	None identified.
Other Environmental Consideration (Non-ASTM Scope)	According to historical sources, the subject property appears to have been developed with a gasoline service station for a period of time from at least 1929 to sometime prior to 1951. A small dry cleaner was identified on the northern portion of the subject property in 1953 (absent from the 1951 and 1962 Sanborn maps), In addition, small-scale auto repair, electric motor repair, and tire service operated at various times throughout the 1950s and 1960s. Although this small dry cleaner and small-scale repair operations were performed on the subject property during these time periods, no indication of the presence of fuel or oil storage tanks was found during the review of historical sources. These areas have since been cleared and redeveloped over the years into its current use, which would have likely included the excavation of surface soils. Based on the small size of the operations visible in Sanborn maps, the time elapsed since this property use, the historical use of the subject property for small-scale auto repair operations is not expected to represent a significant environmental concern. However, the potential for some residual chemical or petroleum impact from these historical operations to remain beneath the existing building is considered a business environmental risk. Railroad tracks were historically located on the southeast portion of the subject property. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The area of the former rail tracks and/or spur(s) is currently the parking garage, prohibiting any direct contact with near-surface soils. In addition, some surface grading and excavation may have occurred as part of the construction of the garage. However, in the event this area of the subject property is redeveloped for residential use, soil sampling may be warranted. Asbestos - Based on the age of the building, asbestos may be present in the building material. The building engineer indicated that warehouses constructed on the subject property in 1930 were gutted and renovated with the existing commercial building constructed around the former warehouses in 1987. AEI observed asbestos warning signs in areas of the subject property. Mr. Hill indicated that during the construction of the office building all materials were removed, however, some mastics on tile floors such as in computer rooms, were identified with asbestos-containing

DRAFT

	mastics. Mr. Hill indicated that all suspect materials were non-friable, and in less than accessible areas. AEI is concurrently completing a NESHAP Pre-Renovation Asbestos Survey and the results will be provided under separate cover when available.
Significant Data Gaps	None identified.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by AH Real Estate Holdings, LLC to conduct a Phase I Environmental Site Assessment (Phase I ESA) in accordance with AEI's proposal and in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 200 North College Street, Charlotte, Mecklenburg County, North Carolina (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

Property Information	
Site Address(es)	200 North College Street, Charlotte, Mecklenburg County, North Carolina 28202
Property ID (APN or Block/Lot)	08001409
Location	East corner of North College Street and East 5th Street
Property Type	Mixed-Use (Office, Retail)
Site and Building Information	
Approximate Site Acreage/Source	3.46/Assessor
Number of Buildings	one
Building Construction Date(s)/Source	1930/Assessor
Building Square Footage (SF)/Source	458,169/Assessor
Net Rentable Square Footage (SF)/Source	458,169/Assessor
Number of Floors/Stories	5
Basement or Subgrade Area(s)	Yes; partial basement
Number of Units	5
Additional Improvements	Seven level parking structure, sidewalks and limited landscaping
On-site Occupant(s)	Wake Forest Graduate School, Merts Restaurant
Current On-site Operations/Use	Evening and weekend graduate school restaurant and vacant office space
Current Use of Hazardous Substances	Yes; refer to Section 7.1
Regulatory Information	
Regulatory Database Listing(s)	Spills, EDR Historical Auto, EDR Historical Cleaner, Drycleaners, LAST

Based on a review of historical sources, the subject property was identified to consist of residences, planing mill, warehouses, tires hops, paint stores, auto repair facilities, tin shops, bicycle shops, dry cleaners, and offices. Railroad also occupied a portion of the subject property.

The following historical addresses were associated with the subject property: 200-232 College Street, 202-216 6th Street, and 201-215 5th Street. These addresses were also researched as part of this assessment.

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	East 6th Street, followed by (300-314 North College Street) a parking structure with ground level stores (213-225 East 6th Street and 227-231 East 7th Street)	SHWS, UST Finder, EDR Historical Auto, UST and Brownfield

DRAFT

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Southeast	Charlotte Light Rail followed by SpringHill Suites (311 East 5th Street).	LAST
Southwest	East 5th Street, followed by Bank of America and ground level retail stores (201-227 East Trade Street, 110-150 North College Street and 204 East 5th Street)	EDR Historical Cleaners, Drycleaners
Northwest	North College Street, followed by Truist Center with ground level retail (214 North Tryon Street and 129 East 5th Street).	EDR Historical Auto, LUST, AST, IMD, UST Finder Release, RCRA NonGen/ NLR SHWS, LAST, IMD

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), incorporating procedures specified in ASTM Standard Practice E1527-21 of 200 North College Street, Charlotte, Mecklenburg County, North Carolina, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property, except for the following:

- AEI's research revealed that the subject property, specifically the current vacant unit along College Street, was formerly occupied by a dry cleaning business. According to available information including city directories, Juns Cleaners and then AJ Cleaners occupied this unit from approximately 1989 to 2020. Based on a review of the NC Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Compliance Program, Jun's Dry Cleaners is classified as a petroleum, dry cleaner facility, which had been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant with documented perchloroethylene use during that time. In 2003, Mr. Park reportedly installed a new dry-to-dry Realstar petroleum solvent dry-cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to a Genesis III hydrocarbon machine. Dry cleaning operations that utilize perc/chlorinated solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. In addition, there is a potential for hazardous vapors to migrate through the slab and into the indoor air of the facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a REC.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real

DRAFT

estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property, except for the following:

- According to historical sources, the subject property appears to have been developed with a gasoline service station for a period of time from at least 1929 to sometime prior to 1951. A small dry cleaner was identified on the northern portion of the subject property in 1953 (absent from the 1951 and 1962 Sanborn maps), In addition, small-scale auto repair, electric motor repair, and tire service operated at various times throughout the 1950s and 1960s. Although this small dry cleaner operation and small-scale repair operations were performed on the subject property during these time periods, no indication of the presence of chemical storage, fuel, or oil storage tanks was found during the review of historical sources. These areas have since been cleared and redeveloped over the years into its current use, which would have likely included the excavation of surface soils. Based on the small size of the operations visible in Sanborn maps, the time elapsed since this property use, the historical use of the subject property for small-scale auto repair operations is not expected to represent a significant environmental concern. However, the potential for some residual chemical or petroleum impact from these historical operations to remain beneath the existing building is considered a business environmental risk.
- Railroad tracks were historically located on the southeast portion of the subject property. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The area of the former rail tracks and/or spur(s) is currently the parking garage, prohibiting any direct contact with near-surface soils. In addition, some surface grading and excavation may have occurred as part of the construction of the garage. However, in the event this area of the subject property is redeveloped for residential use, soil sampling may be warranted.
- Asbestos - Based on the age of the building, asbestos may be present in the building material. The building engineer indicated that warehouses constructed on the subject property in 1930 were gutted and renovated with the existing commercial building constructed around the former warehouses in 1987. AEI observed asbestos warning signs in areas of the subject property. Mr. Hill indicated that during the construction of the office building all materials were removed, however, some mastics on tile floors such as in computer rooms, were identified with asbestos-containing mastics. Mr. Hill indicated that all suspect materials were non-friable, and in less than accessible areas. AEI is concurrently completing a NESHAP Pre-Renovation Asbestos Survey and the results will be provided under separate cover when available.

RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

DRAFT

- Former dry cleaner/perc use - Further evaluation of former dry cleaner to determine if the subsurface has been impacted and determine potential for vapor intrusion.
- Asbestos - Based on the good condition of the identified ACM, these materials can be effectively managed in place as part of an Asbestos O&M Plan. An Asbestos O&M Plan should be developed and implemented at the property.

DRAFT

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in accordance with AEI's proposal and in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 200 North College Street, Charlotte, Mecklenburg County, North Carolina (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-21, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

This report uses the following definitions, as defined by ASTM Standard E1527-21:

Recognized Environmental Condition (REC) - (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

Controlled Recognized Environmental Condition (CREC) - a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Historical Recognized Environmental Condition (HREC) - a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

De Minimis Conditions - a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

DRAFT

Business Environmental Risk (BER) - a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice.

While not a defined term in ASTM, de minimis conditions and BERs are combined and reported as Other Environmental Considerations:

Other Environmental Considerations (OEC) - include, but are not limited to, de minimis conditions and/or business environmental risks (BERs) such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-21. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 Limitations

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made

DRAFT

are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-21.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-21 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-21.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample

DRAFT

analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The DoubleTree Hotel, though on the Subject Property parcel is not included in this assessment.

1.6 Data Failure and Data Gaps

In conformance with ASTM E1527-21, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-21, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. In conformance with ASTM E1527-21, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-21, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	As noted in Section 3.0, historical sources were not obtained at five-year intervals dating back to first developed use. However, it is assumed that during this time period the subject property would have been residential if no occupied by a planing mill. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, Sanborn fire insurance maps, city directories, historical topographic maps, agency records, interviews

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of AH Real Estate Holdings, LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into

DRAFT

possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with AH Real Estate Holdings, LLC and AEI's contract and Terms and Conditions dated August 2, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

DRAFT

2.0 SITE AND VICINITY DESCRIPTION

2.1 Site Location and Description

The subject property is located on the east corner of North College Street and East 5th Street in a commercial area area of Charlotte, North Carolina. The property totals approximately 3.46 acres and is improved with one 5-story building totaling approximately 458,169 square feet. The subject property is currently occupied by Wake Forest MBA School, Merts Restaurant, Forchata Italian Restaurant and DoubleTree Hotel. Though on the Subject Property, the Forchata Italian Restaurant and DoubleTree Hotel are not included in this assessment. On-site operations consist of a evening and weekend graduate school and a restaurant. The property manager indicated that only eight percent of the building was occupied. In addition to the subject property building, the property is improved with a seven level parking structure concrete sidewalks around the building and limited landscaping.

Building Square Footage (SF)/Source	458,169/Assessor
Net Rentable Square Footage (SF)/Source	458,169/Assessor
Number of Floors/Stories	5
Basement or Subgrade Area(s)	Yes; partial basement
Number of Units	5
Additional Improvements	Seven level parking structure, sidewalks and limited landscaping
On-site Occupant(s)	Wake Forest Graduate School, Merts Restaurant
Current On-site Operations/Use	Evening and weekend graduate school restaurant and vacant office space
Current Use of Hazardous Substances	Yes; refer to Section 7.1
Regulatory Information	
Regulatory Database Listing(s)	Spills, EDR Historical Auto, EDR Historical Cleaner, Drycleaners, LAST

2.2 On-Site Utilities

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	Charlotte Water
Sewage Disposal/Treatment	Charlotte Water

Utility source/system information listed in the table above is provided by Mr. Hill, unless otherwise noted above.

DRAFT

2.3 Site and Vicinity Characteristics

The subject property is located in a commercial area of Charlotte, North Carolina. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	East 6th Street, followed by (300-314 North College Street) a parking structure with ground level stores (213-225 East 6th Street and 227-231 East 7th Street)	SHWS, UST Finder, EDR Historical Auto, UST and Brownfield
Southeast	Charlotte Light Rail followed by SpringHill Suites (311 East 5th Street).	LAST
Southwest	East 5th Street, followed by Bank of America and ground level retail stores (201-227 East Trade Street, 110-150 North College Street and 204 East 5th Street)	EDR Historical Cleaners, Drycleaners
Northwest	North College Street, followed by Truist Center with ground level retail (214 North Tryon Street and 129 East 5th Street).	EDR Historical Auto, LUST, AST, IMD, UST Finder Release, RCRA NonGen/ NLR SHWS, LAST, IMD

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

DRAFT

2.4 PHYSICAL SETTING

Geologic Unit	The Subject Property is located within the Piedmont physiographic province, which is characterized by a varied topography that ranges from lowlands to peaks and ridges of moderate altitude and relief. The metamorphic and igneous rocks of this province range in age from Precambrian to Paleozoic and have been sheared, fractured and fold. Included in this province, however, are sedimentary basins that formed along rifts in the Earth's crust and contain shale, sandstone, and conglomerate of early Mesozoic age, interbedded locally with basaltic lava flows and minor coal beds. The sedimentary rocks and basalt flows are intruded in places by diabase dikes and sills (USGS Atlas). Source: USGS and United States Department of the Interior
Soil Series	Urban Land: this designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures; due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property/USDA Soil Survey Source: USDA Soil Survey
USGS Topographic Map	Charlotte East, North Carolina Quadrangle
Nearest surface water to subject property	Little Sugar Creek, approximately 4,000 feet to the southeast
Flood Zone	Zone X Source: FEMA Map 3710455400K dated February 19, 2014
Wetlands	No Source: National Wetlands Inventory
Additional notes	None

Groundwater Flow Direction	Southeast Source: Topographic map interpretation
Estimated Depth to Groundwater	28 feet bgs Source: EDR Radius Map Report with GeoCheck

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

DRAFT

3.0 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-21 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
Prior to 1885	Unknown use	Aerial photographs, Sanborn maps, topographic maps, city directories
1885-1890	Residential and commercial (including planing mill)	Aerial photographs, Sanborn maps, topographic maps, city directories
1896-1905	Residential and commercial (including planing mill, hotel/ inns)	Aerial photographs, Sanborn maps, topographic maps, city directories
1911	Residential and commercial (including planing mill, hotel/ inns, tin shop, bicycle shop, auto repair shop)	Aerial photographs, Sanborn maps, topographic maps, city directories
1929	Electrical and plate glass warehouse, furniture storage, tire sales, gasoline station, auto parts and auto repair, and a hotel. Railroad tracks are depicted traversing the southeast portion of the property	Aerial photographs, Sanborn maps, topographic maps, city directories
1951	Electrical equipment and industrial supplies, tire sales and service, auto parts and auto repair, paints, and hotel. Railroad tracks are depicted traversing the southeast portion of the property	Aerial photographs, Sanborn maps, topographic maps, city directories
1953	Electrical equipment and industrial supplies, tire sales and service, auto parts and auto repair, paints, and a hotel. Railroad tracks are depicted traversing the southeast portion of the property	Aerial photographs, Sanborn maps, topographic maps, city directories
1962	Electrical equipment and industrial supplies, bonded warehouse commodities transfer and storage with and area labeled electric motor repair shop, a restaurant, paints. Railroad tracks are depicted traversing the southeast portion of the property	Aerial photographs, Sanborn maps, topographic maps, city directories
1969	Shoes and industrial supplies, bonded warehouse commodities transfer and storage with and area labeled electric motor repair shop, paints. Railroad tracks are depicted traversing the southeast portion of the property	Aerial photographs, Sanborn maps, topographic maps, city directories
1987-1996	Warehouses gutted and added to, to build the current office building.	Aerial photographs, Sanborn maps, topographic maps, city directories, site personnel

DRAFT

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
1997-Present	Current office building and parking structure	Aerial photographs, Sanborn maps, topographic maps, city directories, site personnel

Based on a review of historical sources, the subject property was identified to consist of residences, planing mill, warehouses, tires hops, paint stores, auto repair facilities, tin shops, bicycle shops, dry cleaners, and offices. Railroad also occupied a portion of the subject property.

The following historical addresses were associated with the subject property: 200-232 College Street, 202-216 6th Street, and 201-215 5th Street. These addresses were also researched as part of this assessment.

AEI's research revealed that the subject property, specifically the current vacant unit along College Street, was formerly occupied by a dry cleaning business. According to available information including city directories, Juns Cleaners and then AJ Cleaners occupied this unit from approximately 1989 to 2020. Based on a review of the NC Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Compliance Program, Jun's Dry Cleaners is classified as a petroleum, dry cleaner facility, which had been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant with documented perchloroethylene use during that time. In 2003, Mr. Park reportedly installed a new dry-to-dry Realstar petroleum solvent dry-cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to a Genesis III hydrocarbon machine. Dry cleaning operations that utilize perc/chlorinated solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. In addition, there is a potential for hazardous vapors to migrate through the slab and into the indoor air of the facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a REC.

According to historical sources, the subject property appears to have been developed with a gasoline service station for a period of time from at least 1929 to sometime prior to 1951. A small dry cleaner was identified on the northern portion of the subject property in 1953 (absent from the 1951 and 1962 Sanborn maps), In addition, small-scale auto repair, electric motor repair, and tire service operated at various times throughout the 1950s and 1960s. Although this small dry cleaner and small-scale repair operations were performed on the subject property during these time periods, no indication of the presence of fuel or oil storage tanks was found during the review of historical sources. These areas have since been cleared and redeveloped over the years into its current use, which would have likely included the excavation of surface soils. Based on the small size of the operations visible in Sanborn maps, the time elapsed since this property use, the historical use of the subject property for small-scale auto repair operations is not expected to represent a significant environmental concern. However, the potential for some residual chemical or petroleum impact from these historical operations to remain beneath the existing building is considered a business environmental risk.

Draft

Railroad tracks were historically located on the southeast portion of the subject property. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The area of the former rail tracks and/or spur(s) is currently the parking garage, prohibiting any direct contact with near-surface soils. In addition, some surface grading and excavation may have occurred as part of the construction of the garage. However, in the event this area of the subject property is redeveloped for residential use, soil sampling may be warranted.

If available, copies of historical sources are provided in the report appendices.

3.1 Aerial Photographs

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years (1938-2020; non-inclusive):

Year(s)	Subject Property Description	Adjoining Site Descriptions
1938, 1948, 1951, 1956, 1965, 1968, 1976	Depicted with two large commercial buildings, and multiple small commercial buildings along North College Street	NORTHEAST: Roadway, followed by large commercial buildings SOUTHEAST: Railroad tracks followed by multiple commercial buildings SOUTHWEST: Roadway followed by agricultural land NORTHWEST: Roadway followed by commercial buildings
1983	The property is occupied by two commercial structures in the central northeast and central southwest portions of the property, with land along the southeast property boundary and northwest property boundaries appearing to be parking	NORTHEAST: Roadway, followed by large commercial buildings SOUTHEAST: Railroad tracks followed by multiple commercial buildings SOUTHWEST: Roadway followed by agricultural land NORTHWEST: Roadway followed by commercial buildings
1988	The property appears to be under construction with the current improvements	NORTHEAST: Roadway, followed by small commercial buildings and paved parking SOUTHEAST: Railroad tracks followed by a commercial building and parking SOUTHWEST: Roadway followed by a parking lot NORTHWEST: Roadway followed by commercial buildings
1993, 1996	The property appears to be improved with the current buildings, and paved parking along the southeast property boundary	NORTHEAST: Roadway, followed by small commercial buildings and paved parking SOUTHEAST: Railroad tracks followed by a commercial building and parking SOUTHWEST: Roadway followed by a parking lot and what appears to be a parking structure NORTHWEST: Roadway followed by commercial buildings

DRAFT

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

The following maps were reviewed (1885-1969; non-inclusive):

Year(s)	Subject Property Description (Listed Address)	Adjoining Site Descriptions
1885	Multiple dwellings and a commercial building in the southeast portion of the parcel labeled J Asbury Planing Mill	NORTHEAST: 6th Street followed by residences SOUTHEAST: Railroad tracks followed by dwellings and a coal shed SOUTHWEST: 5th Street followed by dwellings, a grocer and a warehouse NORTHWEST: College Street followed by a mattress manufacturer, two blacksmiths, carpenter shop, a boarding house and structures labeled shanty
1890	Multiple dwellings and a commercial building in the southeast portion of the parcel labeled J Asbury Planing Mill	NORTHEAST: 6th Street followed by residences SOUTHEAST: Railroad tracks followed by dwellings, Armour Packing Co Dryseed & Beef, and a coal bin SOUTHWEST: 5th Street followed by dwellings, a grocer, a lumber shop and a warehouse and a group of buildings labeled IW Durham & Co Marble & Granite Works NORTHWEST: College Street followed by a JW Wadsworth's Livery carriage houses, a dwelling, and structures labeled shanty
1896	Multiple dwellings and a commercial building in the southeast portion of the parcel labeled J Asbury Planing Mill, and building in the western portion of the property labeled Queen City Hotel	NORTHEAST: 6th Street followed by residences SOUTHEAST: Railroad tracks followed by dwellings, Armour Packing Co Dryseed & Beef SOUTHWEST: 5th Street followed by dwellings, Southern Newspaper Union with a printing shop, and a Cotton Warehouse NORTHWEST: College Street followed by a JW Wadsworth's Livery with carriage houses and a stable yard, an area labeled wood yard, and structures labeled shanty and tenements
1900	Multiple dwellings and a commercial building in the southeast portion of the parcel labeled J Asbury Planing Mill, a building in the western portion of the property labeled Queen City Hotel, and a building along College Street labeled Piedmont Inn	NORTHEAST: 6th Street followed by residences SOUTHEAST: Railroad tracks followed by dwellings, Armour Packing Co Meat House, and a commercial building labeled Star Mill Ginnery and Grist Mill SOUTHWEST: 5th Street followed by dwellings, a printing shop, and a general warehouse NORTHWEST: College Street followed by a

Subject property:

- Historical auto repair facilities, see Sections 3.0 and 5.1

Adjoining Site(s):

- Historical auto repair facilities, see Sections 3.0 and 5.1

If available, copies of historical Sanborn maps are provided in the report appendices.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Refer to the appendices for a complete list of historical subject property tenants identified by EDR. Directories were reviewed in approximate five-year increments from 1921-2020; non-inclusive. The first listing for the subject property appeared in 1921. The following table summarizes the potential tenants of concern at the subject property based on AEI's review of the historical city directories. The addresses searched for the subject property were obtained from a review of historical fire insurance maps and included the following range of addresses for the subject property:

- 201-231 5th Street
- 200-232 College Street
- 200-218 6th Street

Subject Property

Year(s)	Address - Occupant Listed
1925	202 6th Street - Shaw Tire Co 206 College Street - Ajax Tire Co of Charlotte
1931	236 College Street - Humphrey Motor Service
1964	27 5th Street - Myers Auto Service Co Parking
1994	206 College Street - Juns Dry Cleaner & Shoe Repair
1999	206 College Street - Juns Dry Cleaner

DRAFT

Year(s)	Address - Occupant Listed
2005	206 College Street - Juns Dry Cleaner 1

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

The table below summarizes the search of historical city directories conducted for the adjoining sites. Refer to the appendices for a complete list of historical adjoining occupants identified during the review of city directories obtained from EDR.

Adjoining Sites

Direction	Address(es)	Potential Listings of Concern
Northeast	300-314 North College Street 201-231 East 6th Street	None identified
Southeast	350 East 6th Street	None identified
Southwest	200-228 East 5th Street 201-227 East Trade Street 150 North College Street	210 5th Street - Palmer Printing Co (1937-1964. 218 5th Street - Charlotte Radiator (1925), Downtown Service-filling station (1944-1953) 220 5th Street - Stewart Radiator Co (1937)
Northwest	129 East 5th Street 214 North Tryon 201-229 College Street	209 College Street - Greene Motor Co (1931); Queen City Garage Auto Repairs (1937) 215 & 217 College Street - Standard Storage Co auto repairs (1937) 223 College Street - Tuttle & Ray auto repair (1937; Cochran Regrinding Co auto repairs (1944) 225 College Street - Shaw Vulcanizing (1921) 229 College Street - Miller Ralph filling station (1937-1944); Myers Auto Service Paring (1959-1964)

DRAFT

3.4 Historical Topographic Maps

AEI reviewed historical topographic maps of the subject property and surrounding area. A search was made of the EDR collection of topographic maps. Historical topographic maps were reviewed for the following years 1905-2022:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1905, 1907	Depicted small structures	NORTHEAST: Roadway, followed by small structures SOUTHEAST: Railroad tracks, followed by small structures SOUTHWEST: Roadway, followed by small structures NORTHWEST: Roadway, followed by small structures
1942-2022	Shaded to denote urban development, no distinct structures depicted	NORTHEAST: Roadway, followed by shading to denote urban development, no distinct structures depicted SOUTHEAST: Roadway, followed by shading to denote urban development, no distinct structures depicted SOUTHWEST: Roadway, followed by shading to denote urban development, no distinct structures depicted NORTHWEST: Roadway, followed by shading to denote urban development, no distinct structures depicted

Subject property:

- No potential environmental concerns identified

Adjoining Sites:

- No potential environmental concerns identified

If available, copies of historical topographic maps are provided in the report appendices.

3.5 Chain of Title

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

DRAFT

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 Local Environmental Health Department and/or State Environmental Agency

On August 13, 2024, AEI contacted the North Carolina Department of Environmental Quality (NCDEQ) via website for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

AEI conducted a search of available files for the subject property and adjacent and nearby facilities, as summarized in 3.0.

4.2 Fire Department

On August 5, 2024, AEI contacted the Charlotte Fire Department (CFD) via website for information on the subject property to identify any evidence of previous or current hazardous substance usage and/or for any historical information available for the subject property.

AEI spoke with Wesley Graham, Senior Fire Inspector, who indicated that there was no information indicating current or prior use or storage of hazardous substances on file for the subject property with the Charlotte Fire Department.

4.3 Building Department

On August 5, 2024, AEI contacted the Mecklenburg County Code Enforcement (MCCE) via website for information on the subject property in order to identify historical tenants, features of concern and property use.

The search of records online did not identify any environmental concerns.

4.4 Planning Department

On August 5, 2024, AEI contacted the Charlotte Planning Department (CPD) via website for information on the subject property in order to identify AULs associated with the subject property.

According to available files online at https://property.spatialest.com/nc/mecklenburg/#/, evidence indicating the existence of AULs was not on file for the subject property with the Charlotte Planning Department.

4.5 Assessor's Office

On August 5, 2024, AEI contacted the Mecklenburg County assessor's office via website for information on the subject property in order to determine the earliest recorded date of development and use.

DRAFT

Please refer to the following table for information obtained:

Records Summary

APN	08001409
Acreage	3.456 acres
Construction Date	1930
Building Square Footage	458,169 square feet
Current Owner	Terra Funding-Wake Forest, LLC

4.6 Other Agencies Searched

No other agencies were contacted during the course of this assessment.

4.7 Oil and Gas Wells

On August 5, 2024, AEI reviewed the North Carolina Geological Survey (NCGS) maps concerning the subject property and nearby properties. The maps contain information regarding oil and gas well development.

According to the NCGS map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.8 Oil and Gas Pipelines

On August 5, 2024, AEI reviewed the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas pipeline development.

According to the NPMS map, oil or gas pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.9 State Environmental Superliens

On August 5, 2024, the NETR Online Environmental Lien and AUL State Statutes website was visited to determine if the State of North Carolina has an environmental superlien which would allow environmental authorities the right to place a first priority lien on the subject property.

According to the NETR Online Environmental Lien and AUL State Statutes website, the State of North Carolina does not allow environmental superliens.

4.10 State Property Transfer Laws

Aspects of a property's coverage generally fall under state disclosure laws which are considered legal issues, and as such legal counsel should be consulted.

DRAFT

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-21 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix Cof this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	REC or OEC (Yes or No)
Federal NPL (Superfund) sites	1.0	No	0	
Federal Delisted NPL sites	0.5	No	0	
Federal CERCLA removals/orders sites	0.5	No	1	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed site is not considered evidence of a REC.
Federal CERCLA sites with NFRAP	0.5	No	3	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed site is not considered evidence of a REC.
Federal RCRA facilities undergoing Corrective Action	1.0	No	0	
Federal RCRA TSD facilities	0.5	No	0	
Federal RCRA generators (LQG, SQG, VSQG)	SP/ADJ	No	0

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	REC or OEC (Yes or No)
Federal RCRA NonGen/NLR sites	SP/ADJ	No	1	No; however, see below for further discussion of the identified listing.
Federal IC/EC sites	SP	No	0	
Federal ERNS sites	SP	No	0	
State/Tribal "Superfund" equivalent sites	1.0	No	10	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed sites are not considered evidence of a REC.
State/Tribal hazardous waste facilities	0.5	No	36	No; however, see below for further discussion of some of the identified listings.
State/Tribal landfill and solid waste disposal facilities	0.5	No	1	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed site is not considered evidence of a REC.
State/Tribal leaking storage tanks	0.5	No	78	No; however, see below for further discussion of some of the identified listings.
State/Tribal registered storage tanks	SP/ADJ	No	0	No; however, see below for further discussion of some of the identified listings.
State/Tribal voluntary cleanup sites	0.5	No	0	
State/Tribal IC/EC registries	SP	No	17	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed sites are not considered evidence of a REC.
State/Tribal brownfield sites	0.5	No	17	No; based upon the distance, inferred direction of groundwater flow and/or regulatory status, the listed sites are not considered evidence of a REC.
Orphans	N/A	No	5	Yes; see below for further discussion of the identified listing(s).
Additional Environmental Record lists	SP/ADJ	Yes	See below	

Facility Name	CMUD Collection System
Address	200 N College Street, Zone 4
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	Spills

DRAFT

Comments	The listing is for a Sanitary System Overflow (SSO) that occurred on May 20, 2010, with a Notice of Violation (NOV) sent on June 17, 2010. Based on the material released, this listing is not expected to present a potential concern to the subject property.

Facility Name	Shaw Victor Co
Address	36 North College Street
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	EDR Historical Auto
Comments	The EDR HIST AUTO database lists "Shaw Victor," a gasoline and oil service station, at the subject property in 1937. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. No corresponding listings indicating a release is included in the database. Based on the lack of a reported release relating to this facility, it is not considered a potential concern.

Facility Name	Juns Dry Cleaners
Address	206 North College Street
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	Drycleaners, EDR Historical Cleaners
Comments	The EDR HIST CLEANERS database lists "Juns Dry Cleaners" at the subject property in 1994 to 2014s. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. The Drycleaners listing identifies the site as Juns Dry Cleaners and AJs Dry Cleaners, a full service facility (closed) that was established in 1989. Inspection records obtained online at the NCDEQ spanned from 2008 to 2022, with the 2022 inspection identifying the facility as closed. Refer to Section 3.0 for additional information on this former dry cleaner.

Facility Name	Safeway Cleaning Plant
Address	234 North College Street
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	EDR Historical Cleaner
Comments	The EDR HIST CLEANERS database lists "Safeway Cleaning Plant" at the subject property in 1953. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. No corresponding listings indicating a release is included in the database. Based on the lack of a reported release relating to this facility, it is not considered a potential concern.

Facility Name	Spring Hill Downtown
Address	311 E 5th Street
Distance & Direction	Adjoining to the southeast
Hydrologic Position	Down-gradient
Databases Listed	LAST

DRAFT

Comments	This listing was geocoded to the subject property incorrectly as this is located off-site. The adjacent property to the east is identified as Spring Hill Downtown at 311 E 5th Street on the LAST database for a release of petroleum that occurred on November 23, 2015. The case was reported to the NCDEQ on November 30, 2015 and issued incident number 91381 and UST number MO-88558. AEI obtained an Initial Site Assessment Report, prepared by GTA Associates dated February 22, 2016 that indicated their results of confirmatory sampling were below the applicable threshold set by the NCDEQ, and recommended no further action. The NCDEQ issued a no Further Action on March 2, 2016. Based on the regulatory status, this adjacent LAST listing is not expected to present a potential concern to the subject property.

Facility Name	N College St Metals in GW / North College Apartments
Address	300 & 314 North College Street
Distance & Direction	Adjoining to the northeast
Hydrologic Position	Cross-gradient
Databases Listed	SHWS, Brownfields
Comments	The adjoining property to the northeast is identified as N College St Metals in GW at 300 North College Street on the SHWS database. AEI conducted a search of available records online at the NCDEQ and obtained a Limited Phase II Environmental Site Assessment and Preliminary Geotechnical Evaluation prepared by S&ME dated August 14, 2014. The assessment included soil and groundwater sampling and vapor sampling. The assessment concluded that two groundwater samples collected along the southern and presumed downgradient portion of the property did not indicate the presence of VOCs or SVOCs. Several metals were detected in the groundwater samples at concentrations exceeding the respective standards. The presence and concentration of these metals might have been due to the leaching of naturally occurring metals in sediment that was collected with the groundwater samples, rather than from actual dissolved metals. However, SE&ME indicated that the dissolved metals at concentrations exceeding the applicable standards could not be ruled out. The results of the sub-slab vapor samples indicated that soil vapor exhibited detectable concentrations of a variety of VOCs, including chlorinated compounds, petroleum compounds and Freon, and that the VOC impact is across all soil vapor sampling points on the property. While detected concentrations were below the Residential Sub-slab Preliminary Soil Remediation Goals, the presence of these VOCs indicates that the property has been impacted by a release of these materials to the environment and suggests VOCs may be present in other areas of the property, potentially at higher concentrations. The proposed North College Apartments project applied for a brownfields agreement and was deemed eligible, however, in 2015 the NCDEQ changed the status from active eligible to No Further interested due to the lack of activity of the project. However, based on the absence of VOCs and SVOCs in groundwater as well as the cross-gradient location, this property is not considered a REC.

Facility Name	Allright Texaco, Downtown Service CO, Allright Texaco, PAS Inc. Leslie Par
Address	314 East 5th Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Auto (2), UST, UST Finder
Comments	The EDR HIST AUTO database lists identified as the adjacent property to the southwest at 314 East 5th Street as Marton WM (gasoline and oil service station) in 1937, Queen City Storage (gasoline and oil service station, automobile

	garage) in 1944, Downtown Service Co (gasoline station) in 1959, Downtown Allright Texaco Service (gasoline station) in 1969, and Allright Texaco Service (gasoline station) in the years 1974 to 1984. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. The EDR HIST AUTO database lists identified as the adjacent property to the southwest at 314 East 5th Street as PAS Inc Leslie Parker Preside (automobile repairing service) in 1991 and Parker & Snyder (automotive repair shops/ general automotive repair shops) in the years 192 to 1994. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. The adjacent property to the southwest at 314 East 5th Street is identified as Allright Texaco on the UST database. The UST listing identifies the site with two 9999-gallon gasoline tanks installed in December 1965 and removed in October 1989. The site is not included on any other database indicating a release or environmental investigation. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Seventh Street Stn Parking Garage
Address	225 East 6th Street
Distance & Direction	Adjoining to the northeast
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Auto
Comments	The EDR HIST AUTO database lists "Seventh Street Stn Parkg Gar," identified as a gasoline service stations, at the adjoining site to the northeast in 2012 to 2014. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Shoppers Service Station
Address	201 North College Street
Distance & Direction	Adjoining to the northwest
Hydrologic Position	Up-gradient
Databases Listed	EDR Historical Auto
Comments	The EDR HIST AUTO database lists "Shoppers Service Station," identified as gasoline and oil service stations, at the adjoining site to the northwest in the years 1937 to 1944. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	McDonald Service Co

DRAFT

Address	227 N College Street
Distance & Direction	Adjoining to the northwest
Hydrologic Position	UP-gradient
Databases Listed	EDR Historical Auto
Comments	The EDR HIST AUTO database lists "McDonald Service Co," identified as gasoline and oil service stations, at the adjoining site to the northwest in the year 1925. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Hearst Tower Site, Hearst Tower Project, Lincoln Harris LLC
Address	214 North Tryon Street
Distance & Direction	Adjoining to the northwest
Hydrologic Position	Up-gradient
Databases Listed	RCRA NonGen/NLR, AST, LUST, IMD, UST Finder Release
Comments	The facility was listed as a RCRA Non Generator (NONGEN)/No Longer Regulated (NLR) in the year 2015. Additional details provided indicate the facility formerly generated small quantities of hazardous wastes in the year 2005-2007. No violations were identified in connection with the RCRA listing. The adjacent property to the northwest is identified on the LUST database as Hearst Tower Site at 214 North Tryon Street. The site reported a release occurred on October 6, 2000 that was reported to the NCDEQ on October 9, 2000 and received incident number 22994 and UST number MO-6079 6079. The IMD listing indicates that soil and groundwater contamination was discovered during the removal of a UST. Information obtained from the NCDEQ online indicated that the NCDEQ (formerly known as NCDENR) closed the case as a Limited Site Assessment Report with Site Closure request (not available) reported soil contamination did not exceed the residential soil cleanup levels and that contaminated groundwater did not exceed the gross contaminant levels. The UST Finder Release is duplicative of the LUST listing. The AST listing identifies the site as Hearst Tower, indicating the site received a certificate of registration in 2014. Information about the tank construction, site of contents is not provide in the listing. Based on the the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Economy Cleaners
Address	203 East Trade Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Cleaner
Comments	The EDR HIST CLEANERS database lists "Economy Cleaners" at the adjoining site to the southwest in 1949. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities.

	Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Economy Dry Cleaners, Ritz Carlton Crothall Laundry Svc
Address	201 East Trade Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Cleaner, DryCleaner
Comments	The EDR HIST CLEANERS database lists "Economy Dry Cleaner" at the adjoining site to the southwest in 1944. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. The Drycleaners listing identifies the site adjacent to the southwest as Ritz Carlton / Crothall Laundry Svc as a full service (active) facility established October 1, 2009. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Wing Lee Laundry
Address	211 East Trade Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Cleaners, Drycleaners (2)
Comments	The EDR HIST CLEANERS database lists the adjacent property to the southwest at 211 East Trade Street as Jung Co (laundries Chinese) in 1937, Wing Lee Laundry (laundries Chinese/Laundries/garment pressing and cleaners agents) from 1944 to 1971. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. The adjacent property to the southwest at 211 East Trade Street is identified on the Drycleaners databases as Wing Lee Laundry due to a Charlotte 1971 City Directory as a laundries listing. The adjacent property to the southwest at 211 East Trade Street is identified on the Drycleaners databases as Wing Lee Laundry due to a Charlotte 1960 City Directory as a laundries listing. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Gee Chas
Address	19 East Trade Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Cleaner

DRAFT

Comments	The EDR HIST CLEANERS database lists “Gee Chas” at the adjoining site to the southwest in 1925. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Economy Cleaners
Address	231 East Trade Street
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Cross-gradient
Databases Listed	EDR Historical Cleaners, Drycleaners
Comments	The EDR HIST CLEANERS database lists “Economy Cleaners” at the adjoining site to the southwest in 1953. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. The adjacent property to the southwest at 231 East Trade Street is identified on the Drycleaners databases as Wing Lee Laundry due to a Charlotte 1950 City Directory as a laundries listing. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	200 North Tryon Street
Address	200 N Tryon Street
Distance & Direction	425 feet west-northwest
Hydrologic Position	Up-gradient
Databases Listed	SHWS, LAST, IMD
Comments	A nearby site at 200 North Tryon Street, is identified on the SHWS and LAST databases 425 feet to the west-northwest and upgradient of the subject property. The LAST listing indicates a release occurred due to a release of gasoline/diesel that occurred November 19, 1998. AEI conducted a search of available files online at the NCDEQ for the SHWS listing (EPA ID NONC0001211) and obtained a Report of Notification and Contamination Assessment prepared by Law Engineering and Environmental Services, dated November 10, 1998. The report was prepared prior to construction of a proposed high-rise office tower and parking deck. The report concluded that petroleum contaminated soils were encountered in the northeast portion of the site, but the source of teh petroleum contamination is generally unknown, although they identified that the corner of North College Street and East 6th Street was formerly occupied by an auto repair facility that operated underground storage tanks. According to analytical testing, the levels of petroleum contamination in the soils did not exceed the Maximum Soil Contaminant Concentrations (MSCC) listed for a residential use property. Law indicated that further assessment or remedial actions with regard to teh petroleum impact soils was unwarranted at the time. Groundwater at the site was found to be impacted by low levels of petroleum constituent and selected VOCs. Based on the information obtained from the shallow and deep wells installed, no evidence of additional deeper heavier contaminants was found. The concentrations of selected petroleum and VOC constituents generally exceeded the state groundwater quality standards slightly. The site is located in a present and historically urban

DRAFT

	development characterized by closely situated buildings and predominantly paved streets and parking areas. Limited areas exist where surface soils are exposed. It was Law's opinion that the relatively low concentrations of the constituents and the absence of potential receptors for contamination in groundwater at teh site would be conducive to a low priority listing designation on the basis of risk-based criteria, and that further assessment would not be warranted. AEI obtained a letter prepared by the NCDEQ dated March 15, 1999 that indicated that the the case would remain on file, but due tot he low levels of contamination and subsequent low ranking, the NCDEQ Groundwater Section would not conduct an investigation at the site for the foreseeable future. Based on the identified limited contamination, and time since the assessment, this nearby upgradient site is not expected to present a potential concern to the subject property.

5.2 Vapor Migration

AEI conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by ASTM E2600-22 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

AEI reviewed potential sources of COCs from the sites reported on the EDR database report and historical document review. Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the sites evaluated were determined to represent VECs at the property.

5.3 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means “those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts.” Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

DRAFT

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

Source	Subject Property Identified	Adjoining Site(s) Identified	Other Nearby Site(s) of Concern Identified	Comments
EDR PFAS Regulatory Database Listing(s)				No listings warranting discussion were identified

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 Interviews

Pursuant to ASTM E1527-21, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 Interview with Owner

AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

	Yes	No
Any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features.		✔
Any knowledge of previous environmental investigations conducted on site.		✔
Any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products.		✔
Any known plans for site redevelopment or change in site use.		✔
Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		✔
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		✔

6.1.2 Interview with Key Site Manager

The key site manager, Ms. Heather Peterson of Lincoln Harris, was contacted in person on August 12, 2024. Ms. Heather Peterson has been associated with the subject property since approximately 2012. Ms. Heather Peterson stated that the property is mostly vacant building, with no significant issues. Ms. Heather Peterson was asked if they were aware of any of the following:

	Yes	No
Any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features.		✔
Any knowledge of previous environmental investigations conducted on site.		✔
Any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products.		✔
Any known plans for site redevelopment or change in site use.		✔
Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		✔

DRAFT

	Yes	No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		✔
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		✔

6.1.3 Past Owners, Operators, and Occupants

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.4 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. In conformance with ASTM E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.2.1 Environmental Liens

In accordance with our approved scope of services, AEI contracted AFX Research LLC (AFX) to perform an environmental lien and AUL search for the subject property.

According to AFX, environmental liens and AULs were not identified during the review of sources cited in the AFX Research LLC report, which include Mecklenburg County Recorder's Office, Mecklenburg County Assessor's Office, NC Department of Environmental and Natural Resources, and US EPA.

A copy of the AFX report is provided in the appendices.

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment Report (200 North College Street, Charlotte, North Carolina), prepared by Partner Engineering & Science (February 12, 2013)

This report describes the subject property generally consistent with current conditions

DRAFT

The Partner Report offered the following:

- The subject property is currently occupied by Bank of America, Wake Forest University, Fitzgerald's Restaurant, Holiday Inn, Merts Restaurant, Juns Dry Cleaner, Lincoln Harris (property management), Sundries convenience store and Coffee & More for commercial use. Onsite operations consist of office use and retail sales. The adjacent Holiday Inn City Center, located within the same building as the subject property is not included in the subject property. The Holiday Inn City Center consists of a narrow area along north College Street. The boundary between the two areas is not a straight cut line but fluctuates on each floor. On addition the the current structure, the subject property is also improved with an eight level parking garage..
- According to available historical sources, the subject property was formerly developed prior to 1885, developed with mixed residential and commercial structures since at least 1885, developed with commercial properties between 1930 and 1988, and developed with the current structure in 1988.
- The immediately surrounding properties consist of Holiday Inn City Center, North College Street, and Hearst Tower office building with several retail and restaurants located at street level to the northwest; East 6th Street, Cosmos Cate, Phoenix Bar and 7th Street Station parking garage with several retail and restaurants located at street level to the northeast; East 5th Street, One Bank of America Center offices, and a parking garage to the southwest; and a light rail line, a parking garage with vacant retail spaces at street level to the southeast.

The report offered the following conclusions:

- According to the 1929 Sanborn map, a gasoline station was depicted on the northeastern portion of the subject property. However, the gasoline station was not depicted in the 1951 Sanborn map. Based on the length of time that has passed since operations as a gas station, the gasoline station is not expected is not expected to represent a recognized environmental condition.
- According to the property manager, dry cleaning operations have been conducted onsite since 1994. Based on a prior report, this tenant operated as a laundry service and drop-off only location from 1994 until approximately 1998 when a dry cleaning machine utilizing perchloroethylene (PERC) was installed onsite. This machine reportedly operated onsite for approximately five (5) years before being replaced with the current machine. No indications of any releases associated with the use and storage of these materials were noted within the regulatory database or with the agencies contact for this report. According to the owner of the dry cleaner, the dry cleaning chemical currently used at the subject property is a petroleum-based product and has been in use for approximately ten years. Based on the reported short duration of chlorinated solvent used onsite and the current onsite operations using petroleum-based products, the presence of the dry cleaning business on the subject property is not expected to represent a recognized environmental condition to the subject property.

Based on the conclusions of their assessment, Partner recommended no further investigation of the subject property at the time.

A copy of the report is included in the appendices.

DRAFT

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	August 12, 2024
AEI Site Assessor(s)	Jeff Jager
Property Escort(s)/ Relationship(s) to Property	Ms. Heather Peterson, Property Manager, Lincoln Harris Mr. Ricky Hill, Building Engineer, Lincoln Harris
Units/Areas Observed	See Tenant Information table in Section 2.1 Representative interior common areas such as: • Lobby • Management office • Corridors • Restrooms • Basement Exterior areas: roof, parking structure, sidewalks
Area(s) not accessed and reason(s)	Buildings/Units/Suites/Sheds: XXX, XXX, and XXX OR See Tenant Information table in Section 2.1 Exterior areas: XXX, XXX and XXX Refer to Section 1.5 for discussion of limiting condition(s)
Other Physical Constraints	None OR • Large parcel • Large volume of parked vehicles • Large volume of stored materials • Snow • Large puddles of water • Large volume of fallen leaves • XXX Refer to Section 1.5 for discussion of limiting condition(s)

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Feature	Observed on Subject Property
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)	✔
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	✔
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	
Unidentified Substance Containers	
Electrical or Mechanical Equipment Likely to Contain Fluids	✔
Interior Stains or Corrosion	

DRAFT

Feature	Observed on Subject Property
Strong, Pungent, or Noxious Odors	
Pools of Liquid	
Drains, Sumps, and Clarifiers	✔
Pits, Ponds, and Lagoons	
Stained Soil or Pavement	
Stressed Vegetation	
Solid Waste Disposal or Evidence of Fill Materials	
Waste Water Discharges	
Wells	
Septic Systems	
Biomedical Wastes	
Dry Cleaners	✔
Other	

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)

Substance/Waste (size/ quantity)	Location	Operations Associated with Material	Disposal Method/ Frequency	Secondary Containment	Staining/Spills
Diesel Fuel	Parking Garage	Generator Fuel	NA	Yes	No

Based on the lack of a documented release and the lack of evidence of mismanagement, these materials are not considered a REC.

No drains or other subsurface conduits were observed in this area. Based on the small quantities present, the nature of the material, the lack of subsurface conduits and the good housekeeping observed, the presence of these materials is not a REC.

7.1.2 Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Aboveground Hazardous Substance or Petroleum Product Storage Tanks (ASTs)

AST(s)

Size (gallons)	Contents	Installation Date	AST Condition	Location	Construction/ Secondary Containment	Product Piping	Staining/ Spills
4,000	Diesel	Not indicated	Good	Northeast Portion of the Property	Single-Walled-generator room with berm	Aboveground	None

DRAFT

100	Diesel	Not Indicated	Good	South Portion of the Property	Double-walled	Aboveground	None

The subject property is equipped with two emergency generators. Each generator is provided fuel by a diesel aboveground storage tank. The generator along the northeast property line is supplied fuel from a 4,000-gallon diesel tank located in a separate room. The generator in the southern portion of the property is provided fuel by a 100-gallon diesel mounted beneath the generator. No evidence of leaks or spills was observed at the base of the generator. Based on the good condition of the equipment, the presence of the emergency generator and associated diesel fuel is not a REC.

7.1.3 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/ No)	Non-PCB Label (Yes/ No)
Pad-Mounted	3	Duke Energy	1987	No	No
Subsurface	1	Duke Energy	1987	NA	NA

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

The subsurface transformer was identified below the sidewalk in front of DoubleTree Hotel, which Mr. Hill indicated was part of the hotel property, and not included in the assessment.

Elevators

The subject property building is equipped with a hydraulic freight elevator, travelling between the basement and the first floor. Based on the age of the building (post-1978), it is unlikely that the hydraulic fluid within the equipment contains PCBs. The equipment for the elevator

DRAFT

is located insert location. No evidence of stains or leaks was observed at the base of the equipment during the site reconnaissance. The elevator is reportedly maintained by Company Name. Based on the good condition and regular maintenance of the elevator, it is not a REC.

The remaining elevators at the subject property are cable driven elevators with penthouse mounted elevator equipment.

One hydraulic trash compactor was observed on concrete inside the parking garage at the subject property. No evidence of a significant release was observed around this unit. Based on the age of the compactor, it is unlikely that this unit contains PCBs. The hydraulic compactor is associated with the DoubleTree Hotel, and though the hotel's responsibility is located on the subject property. Based on the lack of significant staining or other evidence of a release, the presence of this equipment is not a REC.

7.1.4 Drains, Sumps, and Clarifiers

The subject property contains an oil water separator located on the second level of the parking structure. The unit is located above ground, and according to Mr. Hill, the property formerly operated a scrubber for the parking structure which would be emptied into the oil/water separator. Mr. Hill indicated that the scrubber, and the oil water separator have not been used in years. based on the aboveground location of the oil water separator it is not considered a potential concern.

7.1.5 Dry Cleaners

Subject	Notes/Comments
Number of machines	Two
Age of machine(s)	2003/2015
Brand of machine(s)	Realstar / Genesis II
Model number(s)	KM503 / HSDD250
Type of solvent	Ecosolve / DF2000
Liquid capacity of each machine	Not indicated
Open- or closed-loop system	Closed-loop system
Location of machine(s)	
Floor sealed with solvent resistant se aler	Under and around equipment: Unknown Under the supply chemical storage area: Unknown Under the waste chemical storage area: Unknown
Secondary Containment	Under and around equipment: Unknown Under the supply chemical storage area: Unknown Under the waste chemical storage area: Unknown
Floor drains located near equipment/hazardous substance storage	Yes; discharge to municipal sewer
Waste solvent storage location	Unknown
Duration of dry cleaning operations	1989-2020
Compliance history	Refer to Section 4.1
Former generations of dry cleaning machines	Unknown

At the time of the inspection, the dry cleaner had not operated onsite since at least 2022, with the space currently vacant. The inspection of the commercial space did not identify staining or areas of damaged flooring. Inspection records obtained online at the NCDEQ spanned from 2008 to 2022, with the 2022 inspection identifying the facility as closed. The site is not

DRAFT

included on any database with a release, and a search of available records at the NCDEQ did not identify an environmental concern at the property, relating to the former presence of the dry cleaner.

7.2 Adjoining Property Reconnaissance Findings

Feature	Observed on Adjoining Property
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	
Unidentified Substance Containers	
Electrical or Mechanical Equipment Likely to Contain Fluids	
Interior Stains or Corrosion	
Strong, Pungent, or Noxious Odors	
Pools of Liquid	
Drains, Sumps, and Clarifiers	
Pits, Ponds, and Lagoons	
Stained Soil or Pavement	
Stressed Vegetation	
Solid Waste Disposal or Evidence of Fill Materials	
Waste Water Discharges	
Wells	
Septic Systems	
Biomedical Wastes	
Dry Cleaners	
Other	

During the site reconnaissance, AEI did not observe any of the items listed in the above Reconnaissance Findings Summary table.

DRAFT

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin, and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific, and building products. During the 20th century, some 30 million tons of asbestos were used in industrial sites, homes, schools, shipyards, and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refactory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based on the United States EPA Guidance Document: *Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials* ("Green Book"). In 1973, NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos-containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989, the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation was remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed or in use. Most United States firms voluntarily ceased production of asbestos-containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed-on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Based on the Green Book, the Ban and Phase-Down rule, and the 1930 date of construction, building materials may contain asbestos. According to the EPA, while suspect or ACM may be managed in place under an operations and maintenance program, sampling would be required to document the presence or absence of asbestos-containing material. A summary of suspect or presumed ACM is provided below.

Material	Location	Estimated Quantity	Friable (Yes/No)	Physical Condition	Action
Tile Mastic	Computer Rooms	Not indicated	No	Good	O&M Plan

The building engineer indicated that warehouses constructed on the subject property in 1930 were gutted and renovated with the existing commercial building constructed around the former warehouses in 1987. AEI observed asbestos warning signs in areas of the subject

property. Mr. Hill indicated that during the construction of the office building, all materials were removed, however, some mastics on tile floors such as in computer rooms, were identified with asbestos-containing mastics. Mr. Hill indicated that all suspect materials were non-friable, and in less than accessible areas. AEI is concurrently completing a NESHAP Pre-Renovation Asbestos Survey and the results will be provided under separate cover when available.

8.2 Lead-Based Paint

Lead-based Paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/ cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

LBP is defined as any paint with any detectable amount of lead present in it. It is important to note that LBP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LBP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the date of construction (pre-1978), LBP may be present. All painted surfaces were observed to be in good condition with no chalking, peeling or flaking. Since the subject property is not used for residential use, lead-based paint is not considered to be a significant concern.

8.3 Radon

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/

DRAFT

L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 3, which has a predicted average indoor screening level less than 2.0 pCi/L, below the action level of 4.0 pCi/L set forth by the US EPA.

8.4 Drinking Water Quality

The Charlotte Water supplies potable water to the subject property. Based upon review of the 2023 Drinking Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, lead-in-drinking water sampling was not conducted at the Subject Property.

8.5 Mold

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property building to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of suspect mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

DRAFT

9.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

9.1 FINDINGS

9.1.1 RECOGNIZED ENVIRONMENTAL CONDITION

Recognized Environmental Condition (REC) is defined by the current ASTM Standard Practice E1527-21 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

- AEI's research revealed that the subject property, specifically the current vacant unit along College Street, was formerly occupied by a dry cleaning business. According to available information including city directories, Juns Cleaners and then AJ Cleaners occupied this unit from approximately 1989 to 2020. Based on a review of the NC Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Compliance Program, Jun's Dry Cleaners is classified as a petroleum, dry cleaner facility, which had been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant with documented perchloroethylene use during that time. In 2003, Mr. Park reportedly installed a new dry-to-dry Realstar petroleum solvent dry-cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to a Genesis III hydrocarbon machine. Dry cleaning operations that utilize perc/ chlorinated solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. In addition, there is a potential for hazardous vapors to migrate through the slab and into the indoor air of the facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a REC.

9.1.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-21 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

This assessment has revealed no evidence of CRECs in connection with the subject property.

Draft

9.1.3 Historical Recognized Environmental Conditions

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-21 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

This assessment has revealed no evidence of HRECs in connection with the subject property.

9.1.4 Other Environmental Considerations (Non-ASTM Scope)

Other Environmental Considerations (OEC) include, but are not limited to, de minimis conditions and/or business environmental risks (BERs) such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no related conditions of concern in connection with the subject property, except for the following:

- According to historical sources, the subject property appears to have been developed with a gasoline service station for a period of time from at least 1929 to sometime prior to 1951. A small dry cleaner was identified on the northern portion of the subject property in 1953 (absent from the 1951 and 1962 Sanborn maps), In addition, small-scale auto repair, electric motor repair, and tire service operated at various times throughout the 1950s and 1960s. Although this small dry cleaner and small-scale repair operations were performed on the subject property during these time periods, no indication of the presence of fuel or oil storage tanks was found during the review of historical sources. These areas have since been cleared and redeveloped over the years into its current use, which would have likely included the excavation of surface soils. Based on the small size of the operations visible in Sanborn maps, the time elapsed since this property use, the historical use of the subject property for small-scale auto repair operations is not expected to represent a significant environmental concern. However, the potential for some residual chemical or petroleum impact from these historical operations to remain beneath the existing building is considered a business environmental risk.

- Railroad tracks were historically located on the southeast portion of the subject property. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The area of the former rail tracks and/or spur(s) is currently the parking garage, prohibiting any direct contact with near-surface soils. In addition, some surface grading and excavation may

DRAFT

have occurred as part of the construction of the garage. However, in the event this area of the subject property is redeveloped for residential use, soil sampling may be warranted.

- Asbestos - Based on the age of the building, asbestos may be present in the building material. The building engineer indicated that warehouses constructed on the subject property in 1930 were gutted and renovated with the existing commercial building constructed around the former warehouses in 1987. AEI observed asbestos warning signs in areas of the subject property. Mr. Hill indicated that during the construction of the office building all materials were removed, however, some mastics on tile floors such as in computer rooms, were identified with asbestos-containing mastics. Mr. Hill indicated that all suspect materials were non-friable, and in less than accessible areas. AEI is concurrently completing a NESHAP Pre-Renovation Asbestos Survey and the results will be provided under separate cover when available.

9.1.5 Significant Data Gaps

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

9.2 Conclusions

AEI has performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), incorporating procedures specified in ASTM Standard Practice E1527-21 of 200 North College Street, Charlotte, Mecklenburg County, North Carolina, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property, except for the following:

- AEI's research revealed that the subject property, specifically the current vacant unit along College Street, was formerly occupied by a dry cleaning business. According to available information including city directories, Juns Cleaners and then AJ Cleaners occupied this unit from approximately 1989 to 2020. Based on a review of the NC Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Compliance Program, Jun's Dry Cleaners is classified as a petroleum, dry cleaner facility, which had been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant with documented perchloroethylene use during that time. In 2003, Mr. Park reportedly installed a new dry-to-dry Realstar petroleum solvent dry-cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to a Genesis III hydrocarbon machine. Dry cleaning operations that utilize perc/chlorinated solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to

DRAFT

groundwater beneath a facility. In addition, there is a potential for hazardous vapors to migrate through the slab and into the indoor air of the facility. Based on this information, the presence of a dry cleaning facility on the subject property represents evidence of a REC.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property, except for the following:

- According to historical sources, the subject property appears to have been developed with a gasoline service station for a period of time from at least 1929 to sometime prior to 1951. A small dry cleaner was identified on the northern portion of the subject property in 1953 (absent from the 1951 and 1962 Sanborn maps), In addition, small-scale auto repair, electric motor repair, and tire service operated at various times throughout the 1950s and 1960s. Although this small dry cleaner operation and small-scale repair operations were performed on the subject property during these time periods, no indication of the presence of chemical storage, fuel, or oil storage tanks was found during the review of historical sources. These areas have since been cleared and redeveloped over the years into its current use, which would have likely included the excavation of surface soils. Based on the small size of the operations visible in Sanborn maps, the time elapsed since this property use, the historical use of the subject property for small-scale auto repair operations is not expected to represent a significant environmental concern. However, the potential for some residual chemical or petroleum impact from these historical operations to remain beneath the existing building is considered a business environmental risk.
- Railroad tracks were historically located on the southeast portion of the subject property. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing PCBs, herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The area of the former rail tracks and/or spur(s) is currently the parking garage, prohibiting any direct contact with near-surface soils. In addition, some surface grading and excavation may have occurred as part of the construction of the garage. However, in the event this area of the subject property is redeveloped for residential use, soil sampling may be warranted.
- Asbestos - Based on the age of the building, asbestos may be present in the building material. The building engineer indicated that warehouses constructed on the subject property in 1930 were gutted and renovated with the existing commercial building constructed around the former warehouses in 1987. AEI observed asbestos warning signs in areas of the subject property. Mr. Hill indicated that during the construction

DRAFT

of the office building all materials were removed, however, some mastics on tile floors such as in computer rooms, were identified with asbestos-containing mastics. Mr. Hill indicated that all suspect materials were non-friable, and in less than accessible areas. AEI is concurrently completing a NESHAP Pre-Renovation Asbestos Survey and the results will be provided under separate cover when available.

9.3 RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

- Former dry cleaner/perc use - Further evaluation of former dry cleaner to determine if the subsurface has been impacted and determine potential for vapor intrusion.
- Asbestos - Based on the good condition of the identified ACM, these materials can be effectively managed in place as part of an Asbestos O&M Plan. An Asbestos O&M Plan should be developed and implemented at the property.

DRAFT

10.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

DRAFT

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/22/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/22/2024 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

NC HSDS: The Hazardous Substance Disposal Sites list contains locations of uncontrolled and unregulated hazardous waste sites. The file contains sites on the national priority list as well as the state priority list. The data source is the North Carolina Center for Geographic Information and Analysis.

A review of the NC HSDS list, as provided by EDR, and dated 08/09/2011 has revealed that there are 10 NC HSDS sites within approximately 1 mile of the target property.

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state

DRAFT

funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environment & Natural Resources' Inactive Hazardous Sites Program.

A review of the SHWS list, as provided by EDR, and dated 02/29/2024 has revealed that there are 36 SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environment & Natural Resources' List of Solid Waste Facility Contacts in Alpha Order.

A review of the SWF/LF list, as provided by EDR, and dated 01/24/2024 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 03/11/2024 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 54 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 16 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 5 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and

DRAFT

non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CHARLOTTE MGP NO.1	200 SOUTH COLLEGE ST	WSW 1/8 - 1/4 (0.212 mi.)	U161	236

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 26 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 22 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Waste Description: Selenium

Waste Code: D011
Waste Description: Silver

Waste Code: D016
Waste Description: 2,4-D (2,4-Dichlorophenoxyacetic Acid)

Waste Code: D018
Waste Description: Benzene

Waste Code: D024
Waste Description: M-Cresol

Waste Code: D026
Waste Description: Cresol

Waste Code: D027
Waste Description: 1,4-Dichlorobenzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P012
Waste Description: Arsenic Oxide As2o3 (Or) Arsenic Trioxide

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: P188
Waste Description: Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U010
Waste Description: Azirino [2',3':3,4]Pyrrolo[1,2-A]Indole-4,7-Dione, 6-Amino-8-[[(Aminocarbonyl)Oxy]Methyl]-1,1a,2,8,8a,8b-Hexahydro-8a-Methoxy-5-Methyl-, [1as-(1aalpha, 8beta, 8aalpha, 8balpha)]- (Or)

Mitomycin C

Waste Code: U031
Waste Description: 1-Butanol (I) (Or) N-Butyl Alcohol (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U070
Waste Description: Benzene, 1,2-Dichloro- (Or) O-Dichlorobenzene

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U089
Waste Description: Diethylstilbesterol (Or) Phenol, 4,4'-(1,2-Diethyl-1,2-Ethenediyl)Bis, (E)-

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U132
Waste Description: Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U188

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D007
Waste Description: Chromium

Waste Code: D021
Waste Description: Chlorobenzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum

DRAFT

CONSOLIDATED ENGRAVERS CORP (Continued) **1015735089**

Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: LABP
Waste Description: Lab Pack

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/22/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/22/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

DRAFT

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

DRAFT

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

USGS TOPOGRAPHIC MAP

Target Property Map:	5948285 CHARLOTTE EAST, NC
Version Date:	2013

DRAFT

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

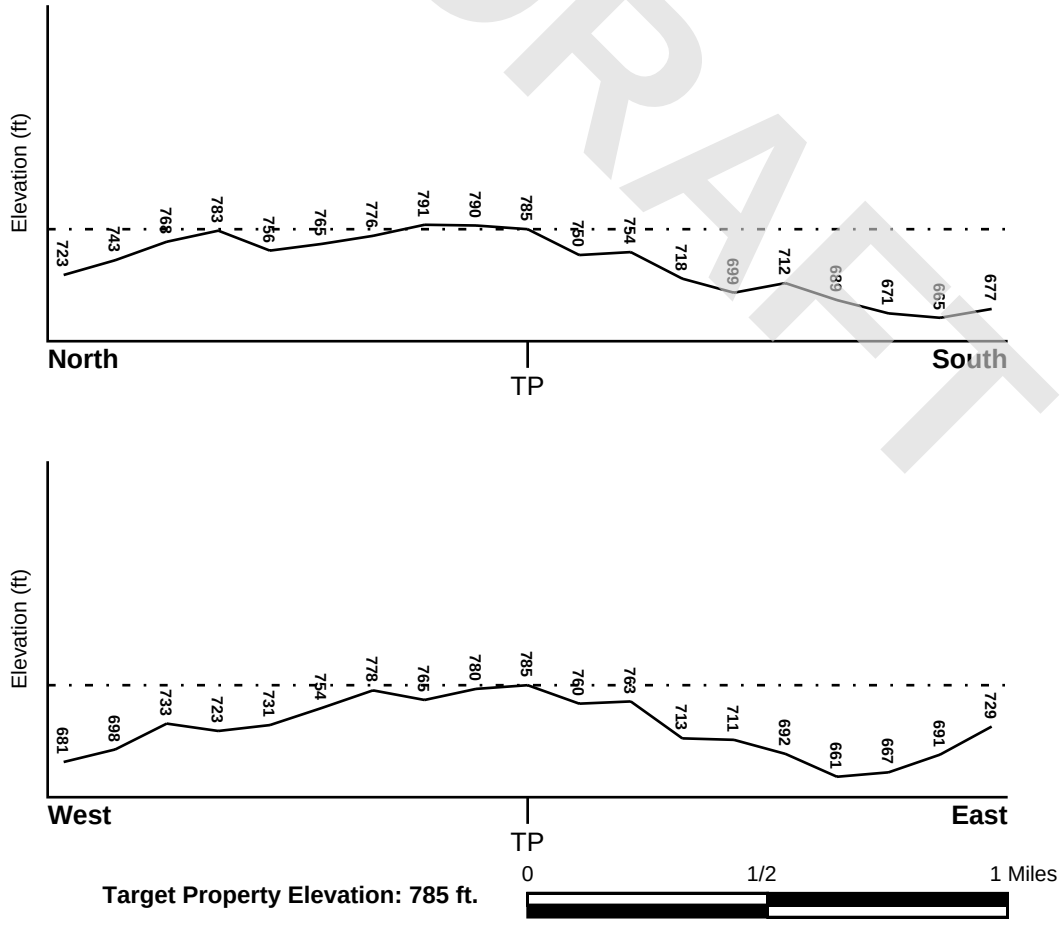
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3710455400K	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3710454400K	FEMA FIRM Flood data
3710455300K	FEMA FIRM Flood data
3710454300L	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CHARLOTTE EAST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: Cecil

Soil Surface Texture: sandy clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 5.5 Min: 4.5
2	5 inches	51 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 5.5 Min: 4.5
3	51 inches	85 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 5.5 Min: 4.5

DRAFT

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: US Fish & Wildlife Service
Telephone: 703-358-2171

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

North Carolina Public Water Supply Wells
Source: Department of Environmental Health
Telephone: 919-715-3243

OTHER STATE DATABASE INFORMATION

North Carolina Wildlife Resources/Game Lands
Source: Center for Geographic Information and Analysis
Telephone: 919-733-2090
All publicly owned game lands managed by the North Carolina Wildlife Resources Commission and as listed in Hunting and Fishing Maps.

NC Natural Heritage Sites: Natural Heritage Element Occurrence Sites
Source: Natural Heritage Occurrence Sites Center for Geographic Information and Analysis
Telephone: 919-733-2090
A point coverage identifying locations of rare and endangered species, occurrences of exemplary or unique natural ecosystems (terrestrial or aquatic), and special animal habitats (e.g., colonial waterbird nesting sites).

NC Natural Areas: Significant Natural Heritage Areas
Source: Center for Geographic Information and Analysis
Telephone: 919-733-2090
A polygon converage identifying sites (terrestrial or aquatic) that have particular biodiversity significance. A site's significance may be due to the presenceof rare species, rare or high quality natural communities, or other important ecological features.

RADON

State Database: NC Radon
Source: Department of Environment & Natural Resources
Telephone: 919-733-4984
Radon Statistical and Non Statiscal Data

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Certified Sanborn® Map Report

08/07/24

Site Name:

200 North College Street
200 North College Street
Charlotte, NC 28202
EDR Inquiry # 7728905.3

Client Name:

AEI Consultants
2500 Camino Diablo
Walnut Creek, CA 94597
Contact: Phillip Hoeksema

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # C892-448B-A459

Limited Permission To Make Copies

AEI Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

FEATURES

No data to display

RECENT SALES HISTORY

The sales history includes only qualified sales made since January 1, 2016. A sale is qualified when it has been verified, by the appraiser, as an arm's length transaction for fair market value. Only qualified sales are considered in the appraisal process. For a complete history of sales and other transfers, please visit Polaris. The Register of Deeds records, indexes, and stores all real estate related documents that are presented for registration.

No data to display

VALUE CHANGES

The value change history shows only changes in appraised value; it does not show exemptions, exclusions or deferrals that could reduce a property's taxable value. If any of these are in effect for a particular tax year, it will be shown on the property tax bill for that year. It is also possible that some previous value changes might be missing from this list or listed in the wrong order. If you have any questions, please call the County Assessor's Office at 704-336-7600.

2023 Annual Drinking Water Quality Report
Charlotte Water

Water System Number: 01-60-010

We are pleased to present to you this year's Annual Drinking Water Quality Report. This report is a snapshot of last year's water quality. Included are details about your source(s) of water, what it contains, and how it compares to standards set by regulatory agencies. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water and to providing you with this information because informed customers are our best allies. **If you have any questions about this report or concerning your water, please call 311 or 704-336-7600.** You can also find more information regarding water quality on our website**:**
https://www.charlottenc.gov/water/Water-Quality

DRAFT

What EPA Wants You to Know

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791) or at https://www.epa.gov/aboutepa/epa-hotlines#drinking

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791), safewater@epa.gov, or at https://www.epa.gov/aboutepa/epa-hotlines#drinking

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Charlotte Water is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800-426-4791) or at https://www.epa.gov/safewater/lead
You may also visit our website at https://charlottewaterlead.org/ for more information on how Charlotte Water's lead reduction program.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

When You Turn on Your Tap, Consider the Source

Mountain Island Lake and Lake Norman supply our treatment plants with high quality water for your home, business, or school. These surface waters are part of the Catawba River Basin, which provides water for more than 1.5 million people in our growing region. Charlotte Water operates three water treatment plants, and they collectively treat an average of 116 million gallons of water a day.

Our Treatment Process

Long before you step in the shower or turn on the tap, Charlotte Water employees have managed numerous processes to protect our drinking water and those who use it. First, we pump the water from Mountain Island Lake and Lake Norman to one of the three water treatment plants - Franklin, Dukes, or Vest. We add powdered activated carbon for taste and odor control followed by aluminum sulfate (alum) in the rapid mix phase to cause dirt particles to coagulate, which are then removed through settling. The water then flows through filters that trap even smaller particles. We add chlorine to prevent bacterial growth and fluoride to promote dental health. We also add lime to adjust the water's pH, which helps prevent pipe corrosion and the leaching of metals into the water. We then pump the water to homes, businesses, and storage tanks through over 4,570 miles of water pipes.

DRAFT

Source Water Assessment Program (SWAP) Results

The North Carolina Department of Environmental Quality (DEQ) Public Water Supply (PWS) Section, Source Water Assessment Program (SWAP) conducted assessments for all drinking water sources across North Carolina. The purpose of the assessments was to determine the susceptibility of each drinking water source (well or surface water intake) to Potential Contaminant Sources (PCSs). The results of the assessment are available in SWAP Assessment Reports that include maps, background information and a relative susceptibility rating of Higher, Moderate or Lower.

The relative susceptibility rating of each source for Charlotte Water was determined by combining the contaminant rating (number and location of PCSs within the assessment area) and the inherent vulnerability rating (i.e., characteristics or existing conditions of the well or watershed and its delineated assessment area). The assessment findings are summarized in the following table:

Susceptibility of Sources to Potential Contaminant Sources (PCSs)

Source	Inherent Vulnerability Rating	Contaminant Rating	Susceptibility Rating	SWAP Report Date
Mt. Island Lake/Catawba River	Moderate	Moderate	Moderate	September 2020
Lake Norman	Higher	Higher	Higher	September 2020

Report Date: September 9, 2020

The complete SWAP Assessment report for Charlotte Water may be viewed on the Web at https://www.ncwater.org/?page=600. Note that because SWAP results and reports are periodically updated by the PWS Section, the results available on this web site may differ from the results that were available at the time this Consumer Confidence Report (CCR) was prepared. If you are unable to access your SWAP report on the web, you may mail a written request for a printed copy to: Source Water Assessment Program – Report Request, 1634 Mail Service Center, Raleigh, NC 27699-1634, or email requests to swap@ncdenr.gov. Please indicate your system name, number, and provide your name, mailing address and phone number. If you have any questions about the SWAP report, please contact the Source Water Assessment staff by phone at 919-707-9098 or email at swap@ncdenr.gov.

It is important to understand that a susceptibility rating of "higher" does not imply poor water quality, only the system's potential to become contaminated by PCSs in the assessment area.

Help Protect Your Source Water

Protection of drinking water is everyone's responsibility. Charlotte Water partners with Charlotte-Mecklenburg Storm Water Services, Duke Energy, the Lake Norman Marine Commission, NC State University, and the NC Department of Environmental Quality to expand the scope of source water quality monitoring and watershed protection in Lake Norman and Mountain Island Lake. You can help protect your community's drinking water source(s) in several ways: If you see or suspect potential water contaminations, water leaks, or sewage spills, please call **311 or 704-336-7600**. We will respond 24 hours-a-day, 365 days-a-year. Dispose of chemicals properly and take used motor oil to the four Mecklenburg County recycling centers. Put only toilet paper in the toilet. All other products should go in the trash including 'flushable' wipes.

DRAFT

Violations that Your Water System Received for the Report Year

During 2023, we received **zero** drinking water violations.

Important Drinking Water Definitions:

Action Level (AL) - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Locational Running Annual Average (LRAA) – The average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters under the Stage 2 Disinfectants and Disinfection Byproducts Rule.

Maximum Contaminant Level (MCL) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfection Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfection Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Nephelometric Turbidity Unit (NTU) - Nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Non-Detects (ND) - Laboratory analysis indicates that the contaminant is not present at the level of detection set for the particular methodology used.

Not-Applicable (N/A) – Information not applicable/not required for that particular water system or for that rule.

Parts per million (ppm) or Milligrams per liter (mg/L) - One part per million corresponds to one minute in two years or a single penny in $10,000.

Parts per billion (ppb) or Micrograms per liter (ug/L) - One part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/L) - One part per trillion corresponds to one minute in 2,000,000 years, or a single penny in $10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/L) - One part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in $10,000,000,000,000.

Picocuries per liter (pCi/L) - Picocuries per liter is a measure of the radioactivity in water.

Running Annual Average (RAA) – The average of samples taken at all locations throughout the system.

DRAFT

Total Organic Carbon (TOC) - has no health effects, however, organics provide a medium for the formation of disinfection byproducts. The TOC compliance criterion applies only to treated water.

Treatment Technique (TT) **-** A required process intended to reduce the level of a contaminant in drinking water.

Water Quality Data Tables of Detected Contaminants

We routinely monitor for over 150 contaminants in your drinking water according to Federal and State laws. The following tables list all the drinking water contaminants that we <u>detected</u> in the last round of sampling for each contaminant group. The presence of contaminants does <u>not</u> necessarily indicate that water poses a health risk. **Unless otherwise noted, the data presented in this table is from testing done January 1 through December 31, 2023.** The EPA and the State allow us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.
Note: Vest WTP was offline part of the year: from 1/1/23 – 5/21/23 for rehabilitation.

DRAFT

Tables of Detected Contaminants

Turbidity*

Nephelometric Turbidity Unit (NTU)	Year Sampled	Treatment Technique (TT) Violation Y/N	Water Treatment Plant (WTP)	Result NTU	MCLG	Treatment Technique (TT) Violation if:	Likely Source of Contamination
<u>Highest</u> Single Turbidity Measurement	2023	N	Franklin	0.274	N/A	Turbidity > 1.0 NTU	Soil runoff
			Dukes	0.187			
			Vest	0.098			
Lowest Monthly Percentage (%) of Samples Meeting Turbidity Limits	2023	N	Franklin	100%	N/A	Less than 95% of monthly turbidity measurements are ≤0.3 NTU	
			Dukes	100%			
			Vest	100%			

***** Turbidity (NTU) is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system. The turbidity rule requires that 95% or more of the monthly samples must be less than or equal to 0.3 NTU.

Inorganic Contaminants

Contaminant	Year Sampled	MCL Violation Y/N	Water Treatment Plant (WTP)	Result (highest)	Range Low - High	MCLG	Likely source of contamination
Fluoride (ppm)	2023	N	Franklin	0.84	0.19 – 0.84	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
			Dukes	0.83	0.60 - 0.83		
			Vest*	1.55*	0.09 – 1.55*		

***** A Tracer Study was conducted at the Vest WTP using Fluoride and is the reason for the expanded low-high range. This was temporary, over the range of just a few days in 2023.

Synthetic Organic Chemical (SOC) Contaminants Including Pesticides and Herbicides

Contaminant (units)	Sample Date	MCL Violation Y/N	Result	Range Low - High	MCLG	MCL	Likely Source of Contamination
2,4-D (ppb)	7/11/2023	N	0.15	ND – 0.15	70	70	Runoff from herbicide used on row crops

Lead and Copper Contaminants

Contaminant (units)	Year Sampled	Result	Number of sites found above the AL	MCLG	AL	Likely Source of Contamination
Copper (ppm) (90th percentile)	2022	None detected at 90th percentile	0	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb) (90th percentile)	2022	None detected at 90th percentile	0	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits

Compliance sampling schedule is once/3yrs. The next sampling event will be in 2025.

DRAFT

Total Organic Carbon (TOC)

Contaminant (units)	Year Sampled	TT Violation Y/N	Water Treatment Plant (WTP)	Lowest RAA Removal Ratio	Range Monthly Removal Ratio Low – High	MCLG	Compliance Method (Step 1 or ACC#__)	Likely Source of Contamination
Total Organic Carbon (removal ratio) (TOC)-TREATED (ppm)	2023	No	Franklin	0.87	0.76 - 1.18	N/A	Compliance Method ACC#2 Treated Water <2.00 ppm	Naturally present in the environment
			Dukes	0.86	0.71 – 1.07			
			Vest	0.95	0.89 – 1.01			

The RAA of our removal ratio was below 1.00 during the year, but this was not a treatment technique violation because we met the alternative compliance criteria (ACC) Method #2 for TOC removal as our Treated Water TOC was less than 2.00 ppm.

Disinfectant Residuals Summary

Contaminant (units)	Year Sampled	MRDL Violation Y/N	Water Treatment Plant (WTP)	Highest Running Annual Average (RAA)	Range Low - High	MRDLG	MRDL	Likely Source of Contamination
Chlorine (ppm)	2023	No	Franklin	1.42	0.82 – 1.79	4	4.0	Water additive used to control microbes
			Dukes	1.38	1.12 – 1.68			
			Vest	1.49	1.14 – 1.95			
			Distribution System	1.02	0.51 – 1.59			

DRAFT

Stage 2 Disinfection Byproduct Compliance - Based upon Locational Running Annual Average (highest LRAA)

Disinfection Byproduct	Year Sampled	MCL Violation Y/N	Result (highest LRAA)	Range Low	Range High	MCLG	MCL	Likely Source of Contamination
TTHM (ppb)	2023	N	**53.6**	**22.5**	**77.0**	N/A	80	Byproduct of drinking water disinfection
Location: B01		N	45.8	29.1	60.5			
Location: B02		N	43.3	32.3	58.1			
Location: B03		N	42.8	29.0	59.3

Location: B15		N	19.8	14.5	23.0			
Location: B16		N	17.2	13.0	22.0			

DRAFT

For TTHM: Some people who drink water containing Total Trihalomethanes above the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.
For HAA5: Some people who drink water containing Haloacetic Acids above the MCL over many years may have an increased risk of getting cancer.

The PWS Section requires monitoring for other misc. contaminants, some for which the EPA has set national secondary drinking water standards (SMCLs) because they may cause cosmetic effects or aesthetic effects (such as taste, odor, and/or color) in drinking water. The contaminants with SMCLs normally do not have any health effects and normally do not affect the safety of your water.

Other Miscellaneous Water Characteristics Contaminants – At Entry Point to Distribution System

Contaminant (units)	Year Sampled	Result (average)	Range Low High	Secondary MCL
Alkalinity (ppm)	2023	22	20 – 24	N/A
Aluminum (ppb)	2023	33	25 – 48	50-200 ppb
Calcium Hardness as CaCO3 (ppm)	2023	23	20 – 25	N/A
Chloride (ppm)	2023	6.6	6.1 – 7.0	250 ppm
Conductivity (umhos/cm)	2023	94	87 – 98	N/A
Hardness, Total as CaCO3 (ppm)	2023	30	27 – 32	N/A
Iron, Total (ppb)	2023	1	0 - 14	300
Magnesium (ppm)	2023	1.8	1.7 – 1.9	N/A
Manganese (ppb)	2023	0.2	0 – 23	50
pH	2023	8.6	7.0 – 9.4	6.5 – 8.5*
Silica (ppm)	2023	9.1	7.6 – 11.4	N/A
Sodium (ppm)	2023	3.9	3.6 – 4.8	N/A
Sulfate (ppm)	2023	8.2	7.5 – 9.0	250 ppm
Total Dissolved Solids (TDS) (ppm)	2023	59	50 – 65	500 ppm

* The PWS Section has established a pH range of 7.0 – 9.2 for Charlotte Water in order to ensure optimal corrosion control treatment.

DRAFT

Cryptosporidium

Charlotte Water monitors quarterly for Cryptosporidium and Giardia. There were **zero detects** for 2023.

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal. Our monitoring indicates the presence of these organisms in our source water and/or finished water. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of *Cryptosporidium* may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants and small children, and the elderly are at greater risk of developing life-threatening illness. We encourage immuno-compromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

Unregulated Contaminants Monitoring Rule (UCMR) 5 – Required by EPA

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring rule is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

Contaminant (units)	Sample Date(s)	Result (Average of all Entry Point samples)	Range Low High
PFPeA - Perfluoropentanoic Acid (ppt)	Aug 2023, Nov 2023	1.3	ND – 3.4
PFBA – Perfluorobutanoic Acid (ppt)	Aug 2023, Nov 2023	1.5	ND – 9.7

This sampling is conducted once every 5 years.

DRAFT

Additional Monitoring of Other Unregulated Contaminants

In addition to participating in the EPA's Unregulated Contaminant Monitoring Rule, Charlotte Water has been working with an outside certified laboratory to analyze drinking water samples for other unregulated contaminants.

The following table reflects results only when a contaminant is detected. A full list of all the non-detected contaminants can be found on our website at:
https://www.charlottenc.gov/water/Water-Quality/CCR#tabs

Contaminant (units)	Result (Highest)	EPA Health Advisory (DWEL used unless otherwise noted)
Boron (ppb)	37	7,000 [1]
Bromochloroacetic acid (ppb)	3.3	
Bromochloroacetonitrile (ppb)	0.83	
Bromodichloroacetic acid (ppb)	1.3	
Chromium, Hexavalent (ppb)	0.14	
Dibromoacetonitrile (ppb)	0.52	
Dichloroacetonitrile (ppb)	1.2	
Iodate (ppb)	7.0	
Perchlorate (ppb)	0.06	25[2]
Perfluorohexanoic acid (PFHxA) (ppt)	2.4	
Perfluorooctanesulfonamide (PFOSA) (ppt)	2.6	
Perfluorooctanoic acid (PFOA) (ppt)	1.7	0.004[3]
Perfluoropentanoic acid (PFPeA) (ppt)	2.7	
Strontium (ppb)	39	20,000 [1]

DRAFT

Definitions from EPA 2018 Edition of the Drinking Water Standards and Health Advisories Tables:
Health Advisory (HA): An estimate of acceptable drinking water levels for a chemical substance based on health effects information; an HA is not a legally enforceable Federal standard, but serves as technical guidance to assist Federal, State, and local officials.

1 DWEL: Drinking Water Equivalent Level. A DWEL is a drinking water lifetime exposure level, assuming 100% exposure from that medium, at which adverse, noncarcinogenic health effects would not be expected to occur.

2 Subchronic value for pregnant women.

3 Lifetime HA: The concentration of a chemical in drinking water that is not expected to cause any adverse noncarcinogenic effects for a lifetime of exposure, incorporating a drinking water RSC factor of contaminant-specific data or a default of 20% of total exposure from all sources. The Lifetime HA is based on exposure of a 70-kg adult consuming 2 liters of water per day. For Lifetime HAs developed for drinking water contaminants before the Lifetime HA policy change to develop Lifetime HAs for all drinking water contaminants regardless of carcinogenicity status in this DWSHA update, the Lifetime HA for Group C carcinogens, as indicated by the 1986 Cancer Guidelines, includes an uncertainty adjustment factor of 10 for possible carcinogenicity.

Our Environmental Lien and AUL report to 1980 provides a summary of recorded information on a specific property from January 1st, 1980 to present time. The report is intended to assist in the search for environmental liens filed in land title records. The report will verify property ownership, links the recorded transactions which pass title from one person (and/or entity) to another, and provide information on recorded environmental liens and/or Activity and Use Limitations that have been recorded from January 1st, 1980 forward. The scope of this search is compliant with ASTM 1527-21 standards.

Our professional network of trained researchers follow established industry protocols and use client-supplied property information to complete this Environmental Lien and AUL report. The research is conducted at all appropriate government offices based on the location of the subject property. This would include City, County, State, Federal and Tribal offices as needed. The report includes:

- Current deed information (i.e. grantor, grantee, recording dates)
- Historical property transfer information from 1980 forward (i.e. grantor, grantee, recording dates)
- Legal Description
- Environmental Lien information
- Activity and Use Limitation information
- Any Environmental Liens and/or documents referencing AULs that are listed within our summary report

DISCLAIMER

This report was prepared for the intended use of AFX Research, LLC (AFX) and client, exclusively. This report is not a guarantee of title, nor a commitment to insure, nor a policy of title insurance. NO WARRANTY, EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. AFX Research, LLC specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular use or purpose. The information contained in this report is retrieved as it is recorded from the various agencies that make it available. The total liability is limited to the fee paid for this report.

NORTH CAROLINA NON-WARRANTY DEED

Excise Tax	$0.00
Parcel ID	0501 0508 & 0501 0509
Mail/Box to	Grantee
Prepared by	Hamilton Stephens Steele & Martin, PLLC (PM-ejs) 201 N. Tryon Street, Ste 2300 Charlotte, NC 28202 (*no title search performed*)
Brief description for the Index	200 North College Street, Charlotte, North Carolina

THIS NON-WARRANTY DEED ("Deed") is made on the 18 day of June 2024 by and between

GRANTOR	GRANTEE
SOP 200 N. COLLEGE OWNER LP, a Delaware limited partnership	**TERRA FUNDING-WAKE FOREST, LLC,** a Delaware limited liability company
Mailing Address: 301 Commerce Street, Suite 3100 Fort Worth, Texas 76102	Mailing Address: c/o CK Revenue Corp, LLC 301 South College Street, 2810 Charlotte, NC 28202

Grantor and Grantee include the above parties and their respective heirs, successors, and assigns, whether singular, plural, masculine, feminine or neuter, as required by context.

FOR VALUABLE CONSIDERATION paid by Grantee, the receipt and legal sufficiency of which is acknowledged, Grantor by this Deed does hereby grant, bargain, sell and convey to Grantee in fee simple all of the improvements of any nature, located thereon situated in Mecklenburg County, North Carolina and more particularly described as follows (the "Property"): See attached Exhibit A

All or a portion of the Property was acquired by Grantor by instrument recorded in Book 22944, page 68.

All or a portion of the Property ☐ includes or ☒ does not include the primary residence of a Grantor.

A map showing the Property is recorded in Plat Book ___, page ___.

TO HAVE AND TO HOLD the Property and all privileges and appurtenances thereto belonging to Grantee. **Grantor makes no warranty of title to the Property.**

NC Bar Association Real Property Section Form No. 7 – Rev. 6/2021
Printed by Agreement with the NC Bar Association
4870-6416-3614 v. 2

Submitted electronically by "Hamilton Stephens Steele + Martin, PLLC"
in compliance with North Carolina statutes governing recordable documents
and the terms of the submitter agreement with the Mecklenburg County Register of Deeds.

DRAFT

IN WITNESS WHEREOF, Grantor has duly executed this North Carolina Non-Warranty Deed, if an entity by its duly authorized representative.

(I) DIRECTIONS: From the Mooresville Regional Office at 610 E. Center Ave. in Mooresville, Head northeast on N. College St toward E 6th St. Turn left at E. 12th St. Take the ramp on the left onto I-277 N. Take exit 5A to merge onto I-77 N/US-21 N toward Statesville/I-85. Continue to follow I-77 N. Take exit 33 for US-21 N. Turn right at US-21. Exit onto NC-150/E Plaza Dr. Turn right at W. McLelland Ave/NC-152. Turn left at S. Main St/NC-152. Turn right at E. Center Ave. The facility is within the same building as the Holiday Hotel and adjacent to a Mert's restaurant.

(II) FACILITY HISTORY: Jun's Dry Cleaners is classified as petroleum, dry cleaner facility, which has been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick up store from 1989 to 1997. From 1997 to 2003 the facility was a full service perc plant. In 2003, Mr. Park installed a new dry-to-dry Realstar petroleum solvent dry cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to Genesis III hydrocarbon machine. Jun's Cleaners no longer services any area pickup locations.

Solvent History:

Solvent	Dates Used
Perchloroethylene	1997 to 2003
DF2000	2003 to Present
Ecosolve	2003 to Present

Complaints: None

DSCA Sampling: None

(III) FACILITY CLASSIFICATION:

NSPS INSTALLATION CATEGORY – Not Applicable: Juns Dry Cleaning - YS Park Inc utilizes dry cleaning equipment installed in 2015 with a 50 pound drying capacity. Although the solvent-recovery system was installed after December 14, 1982, the total manufacturers' rated dryer capacity was less than 84 pounds. Therefore the facility is not subject to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

Dry Cleaning Equipment Summary

No	Type of Machine	Gen	Manufacturer (Mfr)	Model #	Serial #	Mfr Date	Install Date	End Date	Solvent Used	Observed Operating?
2	Dry-to-Dry	n/a	Genesis III	HSDD250	HSDD-2015-01	2015	3/1/2015	N/A	DF2000	yes
1	Dry-to-Dry	n/a	Realstar	KM503	91138/0090	2003	2003	3/1/2015	Ecosolve	Removed

HAZARDOUS WASTE GENERATOR CATEGORY - CESQG: Juns Dry Cleaning - YS Park Inc is classified as a Conditionally Exempt Small Quantity Generator (CESQG) because the facility has routinely generated less than 220 pounds of waste per month during the past 12 months, and stores less than 2,200 pounds of hazardous waste on site. Juns Dry Cleaning - YS Park Inc has contracted with Safety Kleen (EPA ID# TXR000050930) to transport the facility-generated hazardous waste to a licensed Treatment Storage or Disposal (TSD) facility. The most recent hazardous waste generated was transported to Safety Kleen in Lexington, SC (EPA ID# SCD077995488). Three years of hazardous waste manifests were on site and available for review. Approximately 35 pounds of hazardous waste are generated per month. In the past 12 months, 300 pounds of facility-generated waste were transported off site. The last waste pickup occurred on November 3, 2014, when a total of 200 pounds of hazardous waste were transported off site (Liquid waste). One full 15-gallon drum of hazardous waste was observed on site at the time of the inspection (approx. 120 lbs). The facility utilizes an onsite wastewater treatment unit (WWTU) to dispose of facility-generated contact water.

(IV) INSPECTION SUMMARY: On April 9, 2015, Alicia Roh and Aram Kim, Compliance Inspectors, with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a Compliance Inspection at Juns Dry Cleaning - YS Park Inc. The inspectors met with Mr. Yong Sung Park, store owner, who provided the inspectors access to the facility's equipment and available records.

DRAFT

A new dry-to-dry Genesis III HSDD250 hydrocarbon dry cleaning machine (picture 1) was observed at the time of the inspection. Mr. Park stated that he recently replaced his order machine into a new machine in the beginning of March 2015. The dry cleaning machine is operated Monday-Friday for an average of 3-4 loads per day, starting at 9:00 am. The Genesis III dry cleaning machine was installed within spill containment. Separator water from the dry cleaning machine was observed in a small bucket located within spill containment (picture 3). Mr. Park estimated that the dry cleaning machine generated approximately 1 gallon of separator water per month that was treated in the Zero-Waste evaporator. Mr. Park stated approximately 0.5 gallon of condensate is generated every day from vacuum pump and the collected condensate is also treated on site (picture 4).

A Zero-Waste wastewater treatment unit (evaporator), utilizing carbon filtration, was used at the facility. The Zero-Waste unit was stored within spill containment (picture 5). The WWTU was not observed in operation during the site visit and was only operated once per week. Mr. Park had kept receipts (February and September 2014) on site for new filters for the WWTU.

The designated waste storage area was located in front of the dry cleaning machine. The 15-gallon drum containing waste was stored in spill containment (picture 6). The drum was properly labeled and adequately sealed. Additional empty 15-gallon waste drum was observed in spill containment. Spotting table waste was collected and Mr. Park said that he emptied the spotting table waste container into his waste drum.

Waste manifests for 3 years were kept on site. The Emergency Information form was completed and posted inside the facility and dedicated spill clean-up materials were also available on site.

The following is a summary of Juns Dry Cleaning - YS Park Inc's compliance with respect to the DSCA Required Minimum Management Practices provided in 15A NCAC 02S.0202 and Recovery Act (RCRA) referenced in 40 CFR part 261.5 and 262. It was strongly recommended that Mr. Yong Sung Park contact Mecklenburg County Air Quality in order to determine Juns Dry Cleaning - YS Park Inc's compliance with respect to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

MMP VIOLATIONS - 15A NCAC 02S.0202

None

NESHAP VIOLATIONS - 40 CFR Part 63 Subpart M

NOTE: The Mecklenburg County Air Quality Program retains the authority to determine the facility's NESHAP compliance status.

None

RCRA VIOLATIONS - Hazardous Waste Regulations: 40 CFR Part 262.34

None

(V) CONCLUSIONS: Based on observations documented by the DSCA Inspectors during the April 9, 2015 inspection, Juns Dry Cleaning - YS Park Inc is currently in compliance with the applicable regulations.

MMPs - 15A NCAC 02S.0202

None

NESHAP - 40 CFR Part 63 Subpart M

NOTE: The Mecklenburg County Air Quality Program retains the authority to determine the facility's NESHAP compliance status.

None

DRAFT

RCRA- Hazardous Waste Regulations: 40 CFR Part 261 - 262

None

(VI) ENFORCEMENT HISTORY (Penalties): None

(VII) RECOMMENDATIONS: A DSCA Compliance Program Checklist (#01135) was issued to Mr. Yong Sung Park, owner of Juns Dry Cleaning - YS Park Inc, indicating any compliance issues to be addressed (no response required). Mr. Park was instructed to take the necessary actions to maintain compliance at Juns Dry Cleaning - YS Park Inc. A follow-up inspection should be conducted by April 9, 2015 to confirm compliance.

DRAFT

To: Mr. Young Park, Owner
Jun's Cleaners
206 N. College St.
Charlotte, Mecklenburg
North Carolina 28202

From: Mr. Jack Kitchen, Compliance Inspector
North Carolina Department of Environment and Natural Resources (NCDENR)
Division of Waste Management (DWM)
Dry-Cleaning Solvent Cleanup Act (DSCA) Program

Date: September 15, 2008

Please address the following issues at Jun's Cleaners, as discussed during the compliance inspection on September 10, 2008.

DRAFT

At no time shall any dry-cleaning solvent, wastes containing dry-cleaning solvent, or water containing dry-cleaning solvent be discharged onto land or into waters of the State, sanitary sewers, storm drains, floor drains, septic systems, boilers, or cooling- towers.

1) Spill containment shall be installed and maintained under and around dry-cleaning machines, filters, dry-cleaning solvent pumps, stills, vapor adsorbers, solvent and waste solvent storage areas. Spill containment shall have a volumetric capacity of 110 percent of the largest vessel, tank, or container within the spill containment area and shall be capable of preventing the release of the applicable dry cleaning solvent beyond the spill containment area for a period of at least 72 hours. The spill containment shall be constructed of or sealed with materials that are impervious to the applicable dry-cleaning solvent. ***An 11-gallon spill containment used for 15-gallon solvent waste drums was observed.***
2) All waste drums and containers containing waste (including contact water containers) must be sealed (except when adding or removing wastes) and stored in spill containment.
3) Absorbent spill clean-up materials must be available on site for use to clean up any spills. *Your solvent supplier or waste pickup company can advise you regarding the proper absorbent materials to use.*
4) Onsite wastewater treatment units (evaporators/misters) should be equipped with two carbon filters. *DSCA strongly recommends the utilization of two carbon filters with your (evaporator/mister) to ensure that the contact water containing perc solvent is completely recovered and not released into the environment.*
5) Change your filters on your (evaporator/mister) as recommended by the manufacturer and dispose of the filters in the hazardous waste drums.
6) Spill containment is required under all on-site waste treatment units (mister or evaporators). ***The Zero Waste evaporator was observed without spill containment.***
7) Maintain on site all wastewater treatment unit replacement filter purchase receipts. *DSCA recommends at least a two month's supply of wastewater treatment unit filters to be available on site.*
8) To protect against fire hazards, loss of valuable solvent, and emissions of solvent to the atmosphere, periodic inspection of dry cleaning equipment for evidence of leaks and prompt repair of any leaks is recommended. DSCA recommends weekly inspections and that the results are recorded in an inspection log. All vapor or liquid leaks should be repaired with in the subsequent 7 day period.
9) DSCA recommends that you maintain on site receipts for solvent purchases (please keep these organized and in order from most recent to oldest).

10) DSCA advises that you contact your hazardous waste transporter to determine disposal acceptance requirements for mercury containing fluorescent bulbs. *Fluorescent light bulbs (which contain mercury) must be managed as any other hazardous waste including shipment to a recycler as hazardous waste or can be managed as universal waste if they are not crushed. Low mercury Fluorescent bulbs (green tips) can be shipped to a recycler as non-hazardous waste or to a municipal lined landfill if the landfill will accept them.*
11) Mop water may potentially contain dry cleaning solvent and therefore would be considered contact water. DSCA strongly recommends that such mop water be either drummed as hazardous waste or treated by utilizing an onsite wastewater treatment unit *(evaporator with a minimum of two carbon filters).*

Please also review the "Minimum Management Practice (MMPs)" compliance requirements and the "Letter of Introduction" as it lists items that compliance inspectors will need to review to determine environmental compliance at your dry cleaner facility.

Please submit a written response to the address below by October 6, 2008, as to the actions you have taken to address the above items 1-11.

Division of Waste Management
DSCA Compliance Program – Attn: Eric Swope

(II) FACILITY DESCRIPTION: Jun's Dry Cleaners is classified as petroleum, dry cleaner facility, which has been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick up store from 1989 to 1997. From 1997 to 2003 the facility was a full service perc plant. In 2003 Mr. Park installed a new dry-to-dry petroleum solvent dry cleaning machine. Mr. Park has purchased 120 gallons of EcoSolv solvent between June 2007 and August 2008. Safety Kleen is contracted to remove solvent waste for the facility. Approximately 65 lbs of waste per month is generated based on a review of manifests for the past 12 months. Three years of waste manifests were available for review. The facility utilizes a Zero Waste wastewater treatment Unit (WWTU) to dispose of all contact water generated onsite.

Mr. Park services three pick-up stores from this location:

- Han's Cleaners (I.J.L Bldg.) 201 N. Tryon St # 1050, Charlotte, NC - (704) 375-7971
- New Store Jun's Cleaners 401 N. Tryon St. #110, Charlotte, NC – (704) 347-8877
- Arlington Market Cleaners 315 Arlington Ave, Charlotte, NC

Dry Cleaning Equipment Summary

Type of Machine	Manufacturer	Model #	Serial #	Date (yr) Of Manuf.	Date (yr) Of Instal.	Solvent Used	Observed Operating
Dry to dry	Realstar	KM503	91138/0090	2003	2003	EcoSolv	Yes

(III) SUMMARY: On September 10, 2008, Jack Kitchen and Jason Gill, Compliance Inspectors with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a full compliance inspection at Jun's Dry Cleaners. Eric Swope, Compliance Coordinator, previously conducted an

outreach visit on June 6, 2006. Mr. Young Park, Manager, was on site during the visit and provided the DSCA Inspectors access to the facility equipment and available records.

The following is a summary of Jun's Dry Cleaners' compliance status with respect to the DSCA Required Minimum Management Practices provided in 15A NCAC 02S.0202,

MMPs: 15A NCAC 02S .0202

There was no evidence observed that any dry cleaning solvent or solvent waste was being disposed of into the environment at the time of the inspection.

The facility has retained invoices and shipping manifests for all the solvent waste that are generated at this facility for more than three years. Safety Kleen is contracted to remove and dispose of the facility's dry cleaning waste, including waste generated from the spotting table (picture 4). Two 15-gallon solvent waste drums were stacked on top of each other in an 11-gallon spill pan (picture 7 & 8). The inspector instructed Mr. Young to replace the spill pan with one that meets the volume requirements outlined in the MMPs. The inspector also recommended that the drums be sealed with a metal band and not stored precariously on top of each other.

Mr. Park stated that the solvent filters, four carbon filters, are changed every six months and are drained in the filter housings of the dry cleaning machine for at least 24 hours. The dry waste solvent filter cartridges are then disposed of in the municipal trash.

The Fuller Supply Company provides the facility with EcoSolv solvent in 30-gallon drums. 120 gallons of solvent was delivered to the facility in the past twelve months. When a drum of solvent is delivered to the plant, the entire contents of the drum are added to the dry cleaning machine, which was installed in spill containment. There is no satellite storage area for solvent.

The facility utilizes a Zero Waste WWTU to treat separator water and clothes press vacuum pump condensate. The WWTU utilizes a filter and an electric heated evaporator. The WWTU was in operation at the time of the inspection. Mr. Park stated that the carbon filters are changed monthly and disposed of in the Safety Kleen waste drums. There were two WWTUs stacked on top of each other behind the dry cleaning machine. The WWTUs were not stored in spill containment (picture 3 & 6). The inspector suggested using the spill containment pan currently used by the solvent waste drums after it is replaced with a properly sized pan.

There were no floor drains within the spill containment area of the machine and there were no underground storage tanks being used at this facility.

There was an emergency response plan and information posted near a telephone. There were no emergency spill clean-up materials available at the time of the inspection.

NESHAP: 40 CFR Part 63 Subpart JJJ

Because the drying capacity of this facility is 60 lbs. the facility is not subject to the requirements outlined in subpart JJJ. The DSCA compliance program would refer the facility to Mecklenburg County Air Quality Program if the facility were ever to expand its total drying capacity to exceed 83 lbs.

(RCRA) Hazardous Waste Regulations: 40 CFR Parts 261.5 and 262

EcoSolv dry cleaning solvent has a flashpoint of 142 degrees Fahrenheit therefore the waste generated is not classified as hazardous.

(IV) CONCLUSIONS: Based on observations documented by DSCA Inspectors during the September 10, 2008 inspection, it is believed that Jun's Dry Cleaners is in violation of the following regulations:

DRAFT

MMPs - 15A NCAC 02S.0202

(b)(2) Failure to install spill containment under and around the waste solvent storage area with a volumetric capacity of 110% of the largest vessel within the spill containment.

(b)(2) Failure to install spill containment under and around the waste solvent storage area, (Wastewater Treatment Unit)

(b)(2) Failure to maintain emergency spill clean-up materials on the premises.

(V) RECOMMENDATIONS: A Notice of Violation, (NOV) will be issued to Jun's Cleaners for violations of the DSCA MMPs. It is recommended that a follow up inspection be conducted in 2009 to establish compliance. If the facility is in non-compliance at that time, it is recommended that an enforcement action be initiated by DSCA.

Mecklenburg County to determine petroleum NSPS compliance status/applicability

DRAFT

(I) DIRECTIONS: From the Mooresville Regional Office at 610 E. Center Ave. in Mooresville, Head northeast on N. College St toward E 6th St. Turn left at E. 12th St. Take the ramp on the left onto I-277 N. Take exit 5A to merge onto I-77 N/US-21 N toward Statesville/I-85. Continue to follow I-77 N. Take exit 33 for US-21 N. Turn right at US-21. Exit onto NC-150/E Plaza Dr. Turn right at W. McLelland Ave/NC-152. Turn left at S. Main St/NC-152. Turn right at E. Center Ave. The facility is within the same building as the Holiday Hotel and adjacent to a Mert's restaurant.

(II) FACILITY HISTORY: Jun's Dry Cleaners is classified as petroleum dry cleaner facility, which has been owned and operated by Mr. Yong Sung Park since 1989. The store was a pick up store from 1989 to 1997. From 1997 to 2003 the facility was a full service perc plant. In 2003, Mr. Park installed a new dry-to-dry petroleum solvent dry cleaning machine. Jun's Cleaners no longer services any area pickup locations.

Solvent History:

Solvent	Dates Used
Perchloroethylene	1/1/1997 to 1/1/2003
DF2000 / EcoSolv	1/1/2003 to Present

Complaints: None

DSCA Sampling: None

(III) FACILITY CLASSIFICATION:

NSPS INSTALLATION CATEGORY – Not Applicable: Juns Dry Cleaning - YS Park Inc utilizes dry cleaning equipment installed in 2003 with a 50 pound drying capacity. Although the solvent-recovery system was installed after December 14, 1982, the total manufacturers' rated dryer capacity was less than 84 pounds. Therefore the facility is not subject to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

Dry Cleaning Equipment Summary

No	Type of Machine	Gen	Manufacturer (Mfr)	Model #	Serial #	Mfr Date	Install Date	End Date	Solvent Used	Observed Operating?
1	Dry-to-Dry	n/a	Realstar	KM503	91138/0090	2003	1/1/2003	N/A	Ecosolv/DF2000	yes

HAZARDOUS WASTE GENERATOR CATEGORY - CESQG: Juns Dry Cleaning - YS Park Inc is classified as a Conditionally Exempt Small Quantity Generator (CESQG) because the facility has routinely generated less than 220 pounds of waste per month during the past 12 months, and stores less than 2,200 pounds of hazardous waste on site. Juns Dry Cleaning - YS Park Inc has contracted with Safety Kleen (EPA ID# TXR000050930) to transport the facility-generated waste to a licensed Treatment Storage or Disposal (TSD) facility. The most recent waste generated was transported to Safety Kleen in Cranston RI (EPA ID# RID084802842). Three years of waste manifests were on site and available for review. Approximately 35 pounds of waste are generated per month. In the past 12 months, 275 pounds of facility-generated waste were transported off site. The last waste pickup occurred on August 02, 2012, when a total of 200 pounds of waste were transported off site. One partially-full 15-gallon drum of combustible waste was observed on site at the time of the inspection (approx. 60 lbs). The facility utilizes an onsite wastewater treatment unit (WWTU) to dispose of facility-generated contact water.

(IV) INSPECTION SUMMARY: On January 17, 2013, Alicia Roh, Compliance Inspector, with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a Compliance Inspection at Jun's Dry Cleaning - YS Park Inc. The inspector met with Mr. Yung Park, store owner, who provided the inspector access to the facility's equipment and available records. The dry cleaning machine is operated Monday-Friday for an average of 3-4 loads per day, starting at 9:00 am.

The RealStar dry cleaning machine was installed within spill containment. Separator water from the dry cleaning machine was observed in a small bucket not located within spill containment. Mr. Park estimated that the dry cleaning machine generated approximately one gallon of condensate per day that was treated in the Zero-Waste evaporator. Mr. Park stated that he removes the filters from the dry cleaning machine once per year, for disposal by his waste hauler. Vacuum pump condensate was collected, and Mr. Park stated that the vacuum press condensate was also treated on site.

A Zero-Waste wastewater treatment unit (evaporator), utilizing carbon filtration, was used at the facility. The Zero-Waste unit was not stored within spill containment. The WWTU was not observed in operation during the site visit and was only operated 3 days per week. Mr. Park did not have a record of filter changes, or routine maintenance for the WWTU. Mr. Park was advised to install spill containment underneath the WWTU, begin keeping a maintenance log, and to retain the receipts on site for replacement filters. Mr. Park had a set of replacement filters on site, and stated that he changed the filters monthly. Mr. Park explained that the filter purchases were included with the other supplies ordered and not

separated out on their own piece of paper like the solvent purchases. He agreed to make a photocopy of future filter receipts to keep with his records for Department review. The inspector provided Mr. Park a blank sample log to assist with maintenance recordkeeping for the Zero-Waste unit.

During the inspection, Mr. Park borrowed the inspector's tape measuring tool to measure the available floor space behind the dry cleaning machine, and the footprint of the Zero-Waste unit. With the measurements he obtained, he looked through a few supply catalogs to find a suitable containment deck that would fit the narrow area behind the machine. Mr. Park ordered a 9-gallon recycled containment deck during the inspection and said that it would arrive on Tuesday.

Spotting table waste was collected and Mr. Park said that he emptied the spotting table waste container into his waste drum. The three spotting agents utilized on site were: RustGo, Pyratex, and Stree-Pro. Solvent was not actively stored on site.

The designated waste storage area was located in front of the dry cleaning machine. The 15-gallon drum containing waste was stored in spill containment with an 11-gallon capacity, which is less than the required capacity of 110% of the largest container stored within the containment. The drum was properly labeled and adequately sealed. Mr. Park had a 22-gallon containment deck on site that was not being used, and he said that he would install additional containment for the waste storage area in the afternoon.

The Emergency Information Form (in case of a spill or other emergency) was completed and prominently posted inside the facility during the site visit. Dedicated spill clean-up materials were also available on site.

The following is a summary of Jun's Dry Cleaning - YS Park Inc's compliance with respect to the DSCA Required Minimum Management Practices provided in 15A NCAC 02S.0202 and Recovery Act (RCRA) referenced in 40 CFR part 261.5 and 262. It was strongly recommended that Mr. Yong Sung Park contact Mecklenburg County Air Quality in order to determine Jun's Dry Cleaning - YS Park Inc's compliance with respect to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

MMP VIOLATIONS - 15A NCAC 02S.0202

1. A complete three year history of records of purchase, maintenance, and service of wastewater treatment equipment was not made available to the Department.

2. Spill containment was not installed under and around the wastewater treatment equipment while it was storing water containing solvent.

3. The spill containment being utilized for waste storage has a volumetric capacity less than 110 percent of the largest container that it is storing.

NESHAP VIOLATIONS - 40 CFR Part 63 Subpart M

None

RCRA VIOLATIONS - Hazardous Waste Regulations: 40 CFR Part 262.34

None

(V) CONCLUSIONS: Based on observations documented by the DSCA Inspector during the January 17, 2013 inspection, Jun's Dry Cleaning - YS Park Inc is currently in violation of the following regulations:

MMPs - 15A NCAC 02S.0202

(b)(1)	Failure to maintain and/or make available to the Department required records pertaining to the wastewater treatment unit (atomizer, evaporator, carbon filter, or other equipment for the treatment of wastewater containing solvents) [15A NCAC 02S.0202(b)(1)]. Records shall be kept for a period

DRAFT

	of three years.
(b)(2)	Failure to maintain spill containment under and around the waste solvent storage area by January 1, 2002 [15 NCAC 0202 (b)(2)]. Spill containment shall have a volumetric capacity of 110 percent of the largest vessel, tank, or container within the spill containment area and shall be capable of preventing the release of the applicable dry cleaning solvent beyond the spill containment area for a period of at least 72 hours.
(b)(2)	Failure to install spill containment with a volumetric capacity of 110 percent of the largest vessel, tank, or container within the spill containment area and capable of preventing the release of the applicable dry cleaning solvent beyond the spill containment area for a period of at least 72 hours. [15 NCAC 0202 (b)(2)].

NESHAP - 40 CFR Part 63 Subpart M

None

RCRA- Hazardous Waste Regulations: 40 CFR Part 261 - 262

None

(VI) ENFORCEMENT HISTORY (Penalties): None

(VII) RECOMMENDATIONS: A DSCA Compliance Program Checklist (#00416) was issued to Mr. Yong Sung Park, owner of Jun's Dry Cleaning - YS Park Inc, indicating the compliance issues to be addressed. The inspector provided Mr. Park a copy of the DSCA MMP regulations translated into Korean, and Mr. Park acknowledged that he understood the regulations at the conclusion of the inspection. Mr. Park was instructed to respond to DSCA Compliance in writing by February 8, 2013, the actions taken to bring about compliance. A follow-up inspection should be conducted by January 17, 2014 to confirm compliance.

Center Ave. The facility is within the same building as the Holiday Hotel and adjacent to a Mert's restaurant.

(II) FACILITY HISTORY: AJ's Dry Cleaners (previously Juns Dry Cleaners) is classified as petroleum, dry cleaner facility, which has been owned and operated by Mr. Mark Gurk since October, 2015. From 1989 to October 2015, the facility was owned and operated by Mr. Yong Sung Park. The store was a pick up store from 1989 to 1997. From 1997 to 2003 the facility was a full service perc plant. In 2003, Mr. Park installed a new dry-to-dry Realstar petroleum solvent dry cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to Genesis III hydrocarbon machine. The facility does not serve any area pickup locations.

Solvent History:

Solvent	Dates Used
Perchloroethylene	1997 to 2003
DF2000	2003 to Present
Ecosolve	2003 to Present

DSCA Sampling: None

(III) FACILITY CLASSIFICATION:

NSPS INSTALLATION CATEGORY – Not Applicable: AJ's Dry Cleaners utilizes dry cleaning equipment installed in 2015 with a 50 pound drying capacity. Although the solvent-recovery system was installed after December 14, 1982, the total manufacturers' rated dryer capacity was less than 84 pounds. Therefore the facility is not subject to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

Dry Cleaning Equipment Summary

No	Type of Machine	Manufacturer (Mfr)	Model #	Serial #	Mfr Date	Install Date	End Date	Solvent Used	Observed Operating?
1	Dry-to-Dry	Realstar	KM503	91138/0090	2003	2003	3/1/2015	Ecosolve	Removed
2	Dry-to-Dry	Genesis III	HSDD250	HSDD-2015-01	2015	3/1/2015	N/A	DF2000	yes

HAZARDOUS WASTE GENERATOR CATEGORY - CESQG: AJ's Dry Cleaners is classified as a Conditionally Exempt Small Quantity Generator (CESQG) because the facility has routinely generated less than 220 pounds of waste per month during the past 12 months, and stores less than 2,200 pounds of hazardous waste on site. AJ's Dry Cleaners has contracted with Safety Kleen (EPA ID# TXR000050930) to transport the facility-generated hazardous waste to a licensed Treatment Storage or Disposal (TSD) facility. The most recent hazardous waste generated was transported to Safety Kleen in Lexington, SC (EPA ID# SCD077995488). Three years of hazardous waste manifests were on site and available for review. Approximately 7 pounds of hazardous waste are generated per month. In the past 12 months, no waste was transported off site. The last waste pickup occurred on November 3, 2014, when a total of 200 pounds of hazardous waste were transported off site (Liquid waste). One full and one partially full 15-gallon drums of hazardous waste were observed on site at the time of the inspection (approx. 155 lbs). The facility utilizes an onsite wastewater treatment unit (WWTU) to dispose of facility-generated contact water.

(IV) INSPECTION SUMMARY: On October 19, 2016, Aram Kim, Compliance Inspector, with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a Compliance Inspection at AJ's Dry Cleaners. The inspector met with Mr. Mark Giurk, store owner, who provided the inspector access to the facility's equipment and available records. Mr. Giurk became an owner of the business in October, 2015 and changed the name of the facility from Jun's Dry Cleaners to AJ's Dry Cleaners.

DRAFT

The facility continues to use the same dry cleaning machine that was observed during the previous inspection, a Genesis III HSDD250 petroleum machine. The machine is typically operated between 7:30 a.m. and 2:30 p.m. Monday through Friday for 3-4 loads per day. The machine was observed in operation at the time of the inspection and no problem or concerns were noted. Separator water from the machine was collected in a bucket which was not placed within spill containment. The inspector explained to the owner that separator water collection container should be stored within spill containment. The owner said that he did not know about the rule and corrected the violation by placing spill containment underneath the separator water collection container (picture 1). Mr. Giurk estimated about 0.5 gallon of separator water is generated each week. Pump condensate from the vacuum press pump is also collected in a container (picture 2). Approximately 0.5 gallon of pump condensate is generated per week.

A Zero-Waste evaporator wastewater treatment unit (WWTU), utilizing carbon filtration, was used at the facility. The WWTU was stored within spill containment (picture 3). The owner stated that the WWTU is usually operated every other week and he changed the filters on the WWTU in January, 2016. Mrs. Giurk, wife of the owner, stated that there is a sensor/alarm on the WWTU to indicate the time to change filters on the unit. Mr. Giurk was able to locate the receipts for replacement filters and waste pickup manifests that the previous owner left on site. Since Mr. Giurk was not able to locate the operation manual of the ZeroWaste evaporator WWTU, the inspector emailed the copy of the operation manual to Mr. Giurk after the inspection. The inspector reminded Mr. Giurk to print out the hard copy of the Zero Waste WWTU operation manual to use as a reference and record the date of filter change in the WWTU inspection log in the DSCA Petroleum Compliance Calendar that was provided to him during the inspection. Mr. Giurk said he understood.

A 5-gallon container of DF2000 solvent container was stored within spill containment next to the WWTU (picture 3). The owner said that he usually orders solvent in a 5-gallon container from N. S. Farrington.

The designated waste storage area is located in front of the dry cleaning machine in spill containment (picture 4). Two 15-gallon waste drums were observed at the time of the inspection. One drum was full and the other drum was contained of a used filter. Mr. Giurk said that he has not decided which waste hauler he will be using to have them come pick up waste drums. The inspector reminded Mr. Giurk that the waste manifests should be maintained on site for three years. No spotting agents containing PCE or TCE are used at the facility.

A new emergency information form was given to the owner to fill out and post on site. The inspector observed the dedicated spill cleanup material on site.

The following is a summary of AJ's Dry Cleaners' compliance with respect to the DSCA Required Minimum Management Practices provided in 15A NCAC 02S.0202 and Recovery Act (RCRA) referenced in 40 CFR part 261.5 and 262. It was recommended that Mr. Lucyna Gurk contact Mecklenburg County Air Quality with questions regarding AJ's Dry Cleaners' compliance with respect to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

MMP VIOLATIONS - 15A NCAC 02S.0202

None

NESHAP VIOLATIONS - 40 CFR Part 63 Subpart M

NOTE: The Mecklenburg County Air Quality Program retains the authority to determine the facility's NESHAP compliance status.

None

RCRA VIOLATIONS - Hazardous Waste Regulations: 40 CFR Part 262.34

None

(V) CONCLUSIONS: Based on observations documented by the DSCA Inspector during the October 19, 2016 inspection, AJ's Dry Cleaners is currently in compliance with the applicable regulations.

(VI) ENFORCEMENT HISTORY (Penalties): None

DRAFT

(VII) RECOMMENDATIONS: A DSCA Compliance Program Checklist (#02165) was issued to Mr. Lucyna Gurk, owner of AJ's Dry Cleaners, indicating any compliance issues to be addressed (no response required). Mr. Gurk was instructed to take the necessary actions to maintain compliance at AJ's Dry Cleaners. A follow-up inspection should be conducted by October 19, 2017 to confirm compliance. It was strongly recommended that Mr. Gurk contact Mecklenburg County Air Quality with questions regarding AJ's Dry Cleaners' compliance with the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR Part 63 Subpart M requirements.

(VIII) PHOTOGRAPHS

Picture 1: Separator water collection container is stored within spill containment (corrected during the inspection).

Picture 2: Vacuum press pump located near presses. Pump condensate is collected in a container and treated on site.

Picture 3: ZeroWaste evaporator and solvent container (a 5-gallon black container of DF2000 solvent) stored within spill containment near the machine.

Picture 4: Waste storage area located in front of the dry cleaning machine in adequate spill containment. Two 15-gallon waste drums were observed with one full and one partially full.

DRAFT

Picture 1: Store front of AJ's Cleaners in Mecklenburg County, previously Jun's Cleaners.

Picture 2: Genesis III dry to dry dry-cleaning machine utilizing DF200 solvent within spill containment, installed March 2015.

Picture 3: Rear view of Genesis III dry to dry dry-cleaning machine.

Picture 4: Contact water collected in small container with a 5-gallon container used as spill containment. Approximately 1-gallon of water observed during inspection.

DRAFT

Picture 5: Vacuum pump located behind shirt pressing machines alongside wall. Approximately 1 cup of water observed in container during inspection.

Picture 6: ZeroWaste evaporator stored within containment to rear of dry-cleaning machine. Last filter change ~3 months ago according to owner, however not documented in calendar. Extra filters were on site.

Picture 7: Empty 5-gallon DF2000 drum observed in containment.

Picture 8: Spotting area observed with no condensate present. No TCE/PCE containing solvents observed during inspection.

DRAFT

Picture 9: Spotting solvent storage area observed with no TCE/PCE containing agents present.

Picture 10: Spill cleanup materials observed, located in front of the dry-cleaning machine. Extra filters also stored within the area.

(I) DIRECTIONS: From the Mooresville Regional Office at 610 E. Center Ave. in Mooresville, Head northeast on N. College St toward E 6th St. Turn left at E. 12th St. Take the ramp on the left onto I-277 N. Take exit 5A to merge onto I-77 N/US-21 N toward Statesville/I-85. Continue to follow I-77 N. Take exit 33 for US-21 N. Turn right at US-21. Exit onto NC-150/E Plaza Dr. Turn right at W. McLelland Ave/NC-152. Turn left at S. Main St/NC-152. Turn right at E. Center Ave. The facility is within the same building as the Holiday Hotel and adjacent to a Mert's restaurant.

(II) FACILITY HISTORY: AJ's Dry Cleaners (previously Juns Dry Cleaners) is classified as a petroleum based, dry cleaning facility, which has been owned and operated by Mr. Mark and Mrs. Lucyna Giurk since October 2015. From 1989 to October 2015, the facility was owned and operated by Mr. Yong Sung Park. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant. In 2003, Mr. Park installed a new dry-to-dry Realstar petroleum solvent dry cleaning machine and discontinued the use of perc solvent. In March 2015, Mr. Park replaced the Realstar machine with the Genesis III hydrocarbon machine. The facility services one pick-up store in Gastonia, NC (AJ's Dry Cleaning).

Solvent History:

Solvent	Dates Used
Perchloroethylene	1997 to 2003
Ecosolve	2003 to 2015
DF2000	2003 to present

Previous Inspections:

Complaints: None

DSCA Sampling: None

(III) FACILITY CLASSIFICATION:

NSPS INSTALLATION CATEGORY – Not Applicable: AJ's Dry Cleaners utilizes dry cleaning equipment installed in 2015 with a 50-pound drying capacity. Although the solvent-recovery system was installed after December 14, 1982, the total manufacturers' rated dryer capacity is less than 84 pounds, therefore the facility is not subject to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

Dry Cleaning Equipment Summary

No	Type of Machine	Gen	Manufacturer (Mfr)	Model #	Serial #	Mfr Date	Install Date	End Date	Solvent Used	Observed Operating?

2	Dry-to-Dry	n/a	Genesis III	HSDD250	HSDD-2015-01	2015	3/1/2015	N/A	DF2000	yes

DRAFT

HAZARDOUS WASTE GENERATOR CATEGORY - CESQG: AJ's Dry Cleaners is classified as a Conditionally Exempt Small Quantity Generator (CESQG) because the facility has routinely generated less than 220 pounds of waste per month during the past 12 months, and stores less than 2,200 pounds of hazardous waste on site. AJ's Dry Cleaners is not currently contracted with any waste treatment and disposal facilities. The facility only has dried filters and lint that it stores in waste bins and therefore has not had a waste pick up since the ownership change in 2015. The last waste pick-up occurred under previous ownership on 11/03/2014 when 200 lbs. of liquid waste was transported offsite by Safety Kleen to a Safety Kleen facility. The facility utilizes a ZeroWaste evaporator wastewater treatment unit (WWTU) to treat facility-generated contact water.

(IV) INSPECTION SUMMARY: On March 14, 2018, Ne'Shonda Cobbs, Compliance Inspector, with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a Compliance Inspection at AJ's Dry Cleaners. The inspector met with Mr. Mark Giurk, facility owner, who provided the inspector access to the facility's equipment and available records.

The facility will soon be relocating according to the owner Mr. Giurk. A 10,000-sq. ft. building has been purchased located at 3608 Rozzelles Ferry Rd, Charlotte, NC 28216, the facility is planning to be relocated within the next 3 months. According to Mr. Giurk they are in the process of moving equipment to the new location. Mr. Giurk was informed that once the facility relocates, the "facility change information card" needed to be submitted with all the new information.

The dry-cleaning machine was observed in operation. According to Mr. Giurk, the machine is still new and there have not been any maintenance issues since the last inspection. The machine was installed with containment around and underneath. The facility begins operating the machine at 7 am, Monday through Friday, cleaning an average of 5-7 loads daily. The contact water for the dry-cleaning machine is stored within containment to the rear of the machine. According to the owner, very little water is generated from the machine, approximately 2 gallons at most a week. At the time of inspection less than 1 gallon of contact water was observed. (reference pictures 2-4)

The vacuum pump was observed during the inspection located behind the shirt press machines alongside a wall. According to Mr. Giurk, very little water is generated by the vacuum pump. Mr. Giurk estimated that the machine may produce at most 2-3 cups of condensate a week. At the time of inspection, approximately 1 cup of water was observed. (reference picture 5)

The facility utilizes a ZeroWaste evaporator to treat contact water onsite. The WWTU is stored within containment to the rear of the dry-cleaning machine. According to Mr. Giurk the filter is changed when the machine alarm goes off, with the last change occurring approximately 3 months ago. Mr. Giurk did not record the filter change in the proper area on the compliance calendar, however extra filters were viewed onsite. Filter purchase receipts were not available during the inspection, due to Mrs. Giurk having the information, but Mr. Giurk contacted N.S Farrington and requested a copy of all receipts to send in verification of filter purchases. Mr. Giurk was informed of where to record the information in the calendar and he stated that he would start recording the information forward. (reference picture 6)

The facility does not store any solvent onsite. At the time of inspection 1 empty 5-gallon drum of solvent was observed in containment. According to Mr. Giurk, he orders approximately 20-gallons of DF2000 from N.S. Farrington last year. The records were not onsite to verify, however Mr. Giurk requested invoices from N.S. Farrington on the phone and will send in a copy of the records. He was also informed to keep invoices and receipts on the premises for verification during inspections. (reference picture 7)

The facility did not have any type of waste drums onsite. According to Mr. Giurk, due to limited space in the current facility, the waste drums have already been transported to the new facility. Mr. Giurk stated that there is no liquid waste kept onsite and the only waste produced is from lint and dried filters. He currently does not have a contract with a TSD facility or contract with a waste hauler due to the lack of waste generated since he has taken over ownership of the facility. Mr. Giurk was informed that once he accumulates waste to be transported that he will need to keep a record of the manifests onsite.

DRAFT

The spotting area was observed during the inspection. Mr. Giurk stated that he didn't use any solvents that contained TCE/PCE onsite and none were observed during the inspection. He also stated that little to no condensate is generated in the spotting area. (reference pictures 8 & 9)

An emergency contact information sheet was posted onsite and emergency spill cleanup material was observed during the inspection. Mr. Giurk has been using the DSCA Compliance Calendar to record maintenance checks for the dry-cleaning machine and WWTU. The WWTU manual was onsite and posted near the WWTU on the wall.

The following is a summary of AJ's Dry Cleaners' compliance with respect to the DSCA Required Minimum Management Practices provided in 15A NCAC 02S.0202 and Recovery Act (RCRA) referenced in 40 CFR part 261.5 and 262. Mecklenburg County Air Quality to determine AJ's Dry Cleaners' compliance with respect to the National New Source Performance Standard (NSPS) for Petroleum Dry Cleaners Subpart JJJ found in Title 40 CFR Part 60, Subpart JJJ (40 CFR Sections 60.620 through 60.625).

MMP VIOLATIONS - 15A NCAC 02S.0202

1. A complete three-year history of records of purchase, maintenance, and service of wastewater treatment equipment was not made available to the Department.

NESHAP VIOLATIONS - 40 CFR Part 63 Subpart M
NOTE: The Mecklenburg County Air Quality Program retains the authority to determine the facility's NESHAP compliance status.

None

RCRA VIOLATIONS - Hazardous Waste Regulations: 40 CFR Part 262.34
None

(V) CONCLUSIONS: Based on observations documented by the DSCA Inspector during the March 14, 2018 inspection, AJ's Dry Cleaners is currently in violation of the following regulations:

MMPs - 15A NCAC 02S.0202

(b)(1)	Failure to maintain and/or make available to the Department required records pertaining to the wastewater treatment unit (atomizer, evaporator, carbon filter, or other equipment for the treatment of wastewater containing solvents) [15A NCAC 02S.0202(b)(1)]. Records shall be kept for a period of three years.

NESHAP - 40 CFR Part 63 Subpart M
NOTE: The Mecklenburg County Air Quality Program retains the authority to determine the facility's NESHAP compliance status.

None

RCRA- Hazardous Waste Regulations: 40 CFR Part 261 - 262
None

(VI) ENFORCEMENT HISTORY (Penalties): None

DRAFT

(VII) RECOMMENDATIONS: A DSCA Compliance Program Checklist (#02594) was issued to Mr. Mark Giurk, facility owner of AJ's Dry Cleaners, indicating the compliance issues to be addressed. Mr. Giurk was instructed to respond (or have Mrs. Lucyna Giurk respond) to DSCA Compliance in writing by April 04, 2018, the actions taken to bring about compliance. A follow-up inspection should be conducted by March 14, 2019 to confirm compliance. It was also recommended that Mr. or Mrs. Giurk contact Mecklenburg County Air Quality to determine AJ's Dry Cleaners' compliance with the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR Part 63 Subpart M requirements.

Facility closed, reopened, and has not closed again. Equipment has possibly been relocated to a new facility and new owner operating out of new location.

DRAFT

(I) FACILITY HISTORY: AJ's Dry Cleaners (previously Juns Dry Cleaners) is classified as petroleum, dry cleaner facility, which has been owned and operated by Mr. Mark Gurk since October 2015. From 1989 to October 2015, the facility was owned and operated by Mr. Yong Sung Park. The store was a pick-up store from 1989 to 1997. From 1997 to 2003 the facility was a full-service perc plant. In 2003, Mr. Park installed a new dry-to-dry Realstar petroleum solvent dry cleaning machine. In March 2015, Mr. Park replaced the Realstar machine to Genesis III hydrocarbon machine.

Solvent History:

Solvent	Dates Used
Perchloroethylene	1/1/1997 to 1/1/2003
DF2000	1/1/2003 to Present
Ecosolve	1/1/2003 to Present

Dry Cleaning Equipment Summary

No	Type of Machine	Gen	Manufacturer (Mfr)	Model #	Serial #	Mfr Date	Install Date	End Date	Solvent Used	Observed Operating?
1	Dry-to-Dry	n/a	Realstar	KM503	91138/0090	2003	1/1/2003	3/1/2015	Ecosolve	removed
2	Dry-to-Dry	n/a	Genesis III	HSDD250	HSDD-2015-01	2015	3/1/2015	7/1/2022	DF2000	removed

(II) INSPECTION SUMMARY: On August 11, 2022, Ne'Shonda Cobbs, Compliance Inspector, with the North Carolina Division of Waste Management, Dry Cleaning Solvent Cleanup Act (DSCA) Program conducted a Compliance Inspection at AJ's Dry Cleaners. The inspector was informed in April 2021, that the facility had closed by another facility owner. The inspector did a drive-by inspection of the facility and found the facility operating. On an inspection on 8/11/22, the inspector was again informed of the facility closing. The informant stated that the facility closed and reopened with a new owner. The new owner closed the facility and relocated to a new location. The inspector did a drive by and found the facility was indeed closed. The inspector was able to view the interior through the window and found all the equipment had been removed. A google search of the cleaners showed that AJ's Cleaners was temporarily operating out of a facility at 516 Fenton Ave in Charlotte, NC. The inspector will visit the location to verify whether the equipment is onsite and if there is a new operating facility in the area.

(III) PHOTOGRAPHS:

Picture 1: Store front of AJ's cleaners. Facility is closed.

Picture 2: Area containing dry-cleaning equipment observed through store front window, all items appear to have been removed from the interior of the facility.

Re: Initial Site Assessment Report
Spring Hill Downtown
Charlotte, Mecklenburg County, North Carolina
Incident #: TBD

DRAFT

Dear Mr. Bowser:

In response to contaminated soils identified at 311 East 5th Street, GTA Associates, Inc. (GTA) performed a contaminated soil removal and evaluation at the above referenced property ("subject property") on behalf of Sree Hotels (Client). As part of this evaluation, GTA directed and observed the excavation of contaminated soils identified during construction excavation.

1. Site Information

1.1 Site Identification

- Date of Initial Report: December 2, 2015
- Facility ID: TBD Incident Number: TBD Site Risk: TBD
- Site Name: Spring Hill – Downtown
- Site Street Address: 311 East 5th Street
- City/Town: Charlotte Zip Code: 28202 County: Mecklenburg
- Description of Geographical Data Point: Central location of excavation
- Location Method: GPS (google earth)
- Latitude: 35.226227 Longitude: -80.839446
- Site Location is identified on *Figure 1 Site Location Map*
- Site Topography is identified on *Figure 2 – Topographic Map*

1.2 Information about Contacts Associated with the Release

- Property Owner: Sree Hotels
  - Telephone Number: 704-426-0908
  - Address: 5113 Piper Station, Charlotte, NC 28277

310 Peninsula Lane, Suite B, Charlotte, NC 28273 (704) 553-2300 Fax (704) 553-2400

- Consultant Contractor: GTA Associates, Inc
  - Telephone Number 704-553-2300
  - Address: 710 Peninsula Lane, Suite B, Charlotte, NC 28273
- Analytical Laboratory: ESC Lab Sciences
  - Telephone: 615-773-9668
  - Address: 12065 Lebanon Road, Mt. Juliet, TN 37122

RECEIVED
FEB 22 2016
NCDEQ/MRO UST

1.3 Information about Release

- Date Discovered: 11/23/2015
- Estimated Quantity of Release: N/A, petroleum contaminated media was identified during construction excavation. Total excavation dimensions were 20 feet east to west, 15 feet north to south, and six feet deep below ground surface (bgs)
- Cause of Release: N/A, Contaminated media was identified during excavation, the origin of this contamination is not known.
- Source of Release: N/A, Contaminated media was identified during excavation, the origin of this contamination is not known.
- Size and Contents of Tank or other Containment from which the Release Occurred: N/A, no above or below ground storage tanks were present in the vicinity of the contaminated soil.

1.4 Certification

I, John P. Wille, a Professional Engineer for GTA Associates, Inc., do certify that the information contained in this report is correct and accurate to the best of my knowledge.

GTA Associates, Inc. is licensed to practice engineering in North Carolina. The certification number of the company or corporation is C-3341.

2. Site History and Characterization

During excavation for the foundation of a future Spring Hill Suites Hotel, contaminated soil was identified by the excavation contractor. Samples of the contaminated soil were obtained on November 4, 2015 and analyzed for volatile organic compounds (VOCs), total petroleum hydrocarbon (TPH) diesel range organics (DRO), TPH gasoline range organics (GRO), and Resource Conservation and Recovery Act (RCRA) metals. Contamination identified in the samples was consistent with the release of a petroleum based substance. TPH DRO and TPH GRO were detected in the sample TP-1 taken from an area of staining at concentrations of 33.2

DRAFT

mg/kg and 637 mg/kg, respectively in excess of the North Carolina Department of Environmental Quality (NCDEQ) UST guidance threshold of 10 mg/kg. TPH GRO was detected in the sample TP-2 collected from fill material below the area of staining at a concentration of 54.2 mg/kg in excess of the NCDEQ UST guidance threshold of 10 mg/kg. No aboveground storage tanks (ASTs) or underground storage tanks (USTs) associated with the subject property were identified in the vicinity of the contaminated soils. No free product was identified at the subject property and groundwater was not encountered during the excavation of contaminated soils, there is no surface water body in the vicinity of the subject property that could have been impacted by the identified contamination.

The subject property is currently under development as a future hotel structure and was occupied by concrete and garden landscaping prior to the commencement of construction activities. It is the understanding of GTA that the site served as a staging area for construction materials during the construction of the Time Warner Cable Arena, and historically contained several commercial entities.

The site is bordered to the northwest by railroad tracks followed by commercial and multifamily residential development, to the northeast by a parking structure, to the south by East 5th Street followed by the Time Warner Cable Arena, and to the southeast by North Brevard Street and a parking lot. The vicinity of the subject property is heavily developed by commercial structures and multi-family residential development serviced by public utilities.

The location of the contaminated soils as well as the extent of the excavation is included in the attached *Figure 3 –Site Sketch*.

3. Initial Response and Abatement Action

After a conversation with NCDEQ representatives and receipt of sample data, a Notification of Discharge Form was sent to the NCDEQ on December 2, 2015. At the time of the identification of contamination, no source of the contamination was present on the subject property. The contamination was isolated to shallow surface soils on the subject property and did not interact with groundwater or a surface water body. For these reasons, no receptors were identified in the vicinity of the contamination.

4. Excavation of Contaminated Soil

Due to the size of the subject property and ongoing excavation and construction activity, the contaminated soil was removed in three mobilizations.

The first mobilization was conducted on November 18, 2015 and consisted of the removal of shallow surface soils exhibiting Photoionization Detector (PID) readings ranging from 0 parts per million (ppm) to 500 ppm. The soil consisted of fill material composed of clay, silt, and sand with brick, wood, and concrete debris. Soils were removed until the visual contamination was removed and/or the extent of removal capability was reached due to

DRAFT

placement staged materials and construction equipment. A total of 18.37 tons of soil and debris was removed from the subject property during this mobilization.

The second mobilization was conducted on December 4, 2016. Soils were excavated to a depth of approximately six feet bgs and approximately 15 feet east to west and 15 feet north to south. Fill material was consistent with the first soil removal with less staining. PID readings of soils removed ranged from 0 ppm to 700 ppm. Soils were removed until visual, olfactory, and PID instrument detection were not present on the northern, eastern, southern, and bottom extents. An additional foot of soil was removed from the base of the excavation to verify the deepest extent of contamination was reached. No groundwater, bedrock, or free product were observed in the extents of the excavation. Due to equipment and construction material storage and mobility the western extent of contamination could not be reached during this mobilization. Composite samples were collected from the north sidewall (E1-N), southern sidewall (E1-S), eastern sidewall E1-E), and the base of the excavation (E1-B) and were analyzed for TPH DRO and TPH GRO by direction of the NCDEQ and in accordance with the UST Section *Guidelines for Site Checks, Tank Closure, and Initial Response and Abatement for UST Releases, Change 5*, effective December 1, 2013. Composite samples were collected from the north sidewall, east sidewall, and bottom of the excavation did not contain TPH DRO or TPH GRO concentrations above laboratory detection limits. The composite sample obtained from the southern sidewall did not have a detected concentration of TPH DRO, however TPH GRO had a concentration of 6.08 mg/kg, below the requisite 10 mg/kg identified in the UST Section *Guidelines for Site Checks, Tank Closure, and Initial Response and Abatement for UST Releases, Change 5*, effective December 1, 2013. A total of 82.9 tons of soil and debris was removed from the subject property during this mobilization.

The third and final mobilization to the site to remove contaminated soil associated with the western extent of contamination was conducted on December 23, 2015. The excavation was expanded approximately 5 feet to the west, to a uniform 15 feet north to south, and to a uniform depth of six feet bgs. Fill material remained consistent with previous excavations, and soils were removed until visual, olfactory, and PID detection were not present on the western extent of the excavation. PID readings of soils removed ranged from 0 ppm to 450 ppm. No groundwater, bedrock, or free product were observed in the extent of the excavation. A composite sample was collected from the western sidewall and analyzed for TPH GRO and TPH DRO by direction of the NCDEQ and in accordance with the UST Section *Guidelines for Site Checks, Tank Closure, and Initial Response and Abatement for UST Releases, Change 5*, effective December 1, 2013. The samples collected from the western sidewall of the excavation did not contain TPH DRO or GRO concentrations above laboratory detection limits. A total of 35.11 tons of soil and debris was removed from the subject property during this mobilization.

The location and extent of the contaminated soils are indicated on *Figure 3 – Site Sketch*, and the results of confirmatory samples are included in *Table 1 – Analytical Data Summary*. The final excavation was approximately 20 feet east to west, 15 feet north to south, and a total depth of approximately six feet bgs. The soils were excavated using an on-site excavator, loaded onto trucks for transportation to an off-site soil disposal facility. Manifests from the disposal facility

are included in *Appendix B*. Soil excavation was guided by visual and olfactory perception as well as a PID that was calibrated each day soil removal occurred.

3.0 Conclusions

Based on the results of confirmatory TPH GRO and TPH DRO sampling at the extent of the excavation on the subject property being below the 10 mg/kg threshold indicated in the UST Section *Guidelines for Site Checks, Tank Closure, and Initial Response and Abatement for UST Releases, Change 5,* effective December 1, 2013 and lack of groundwater, bedrock, or free product being identified in the excavation: GTA requests a no further action determination be issued by the NCDEQ.

4.0 Limitations

GTA's conclusions are based on observations of existing conditions, professional experience in the area with similar projects, and generally accepted professional environmental practice under similar circumstances. The conclusions reached regarding the conditions of this site do not represent a warranty that all areas within the site are of a similar quality as may be inferred from observable site conditions, available site history, and soil samples. Site soil conditions were inferred from the results of field screening of soil samples obtained at specific locations and on specific dates. These conditions may not remain consistent through the passage of time. Please be advised that no subsurface evaluation can wholly eliminate uncertainty regarding the potential for environmental liability in connection with the property.

We appreciate the opportunity to be of assistance on this project. Should you have any questions regarding this information, or should you require additional information, please contact the undersigned at your convenience.

Sincerely,
GEO-TECHNOLOGY ASSOCIATES, INC.

DRAFT

Important Information about This

Geoenvironmental Report

DRAFT

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of nonintrusive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered*, because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else — a third party — will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

DRAFT

Do Not Separate Documentation from the Report

Geenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

DRAFT

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.

Table B-5: Public and Private Water Supply Well and Other Receptor Information

Revision Date: 2/16 Incident Number and Name: TBD, Spring Hill Downtown Facility ID#: N/A

Public and Private Water Supply Wells

Well #	Well Owner/ User (indicate which)	Address	Phone Number	Latitude/ Longitude * (decimal degrees)	Well Use	Well Depth (ft BGS) **	Type of Well	Well Casing Depth (ft. BGS)	Well Screen Interval (x to y ft. BGS)	Distance from source area of release (ft.)	Up or downgradient

Other Receptors

(Other public water supplies, reservoirs, supply lines, surface water bodies, wellhead protection areas, recharge areas for deep aquifers, subsurface structures)

Receptor ID	Description	Location	Latitude/ Longitude of any significant point(s)* *(describe to left)* (decimal degrees)	Contact	Phone Number	Usage	Up or down-gradient	Distance from source area of release (ft.)

* The location must be sufficiently accurate and precise to allow easy recovery of lost or damaged wells or replication of sampling points.

** ft BGS – feet below ground surface

***NO RECEPTORS WERE IDENTIFIED, contamination was isolated to the subject property and in shallow surface soils.

DRAFT

Table B-3: Summary of Soil Sampling Results

Revision Date: 2/16 Incident Number and Name: TBD, Spring Hill Downtown Facility ID#. N/A

Analytical Method (e.g., VOC by EPA 8260) →												
Contaminant of Concern →												
Sample ID	Date Collected (m/dd/yy)	Source Area (eg. Tank pit 1)	Sample Depth (ft BGS)	Incident Phase (Closure , 20Day, LSA, etc.)								
Soil to groundwater MSCC (mg/kg)												
Residential MSCC (mg/kg)												
Industrial/Commercial MSCC (mg/kg)												

DRAFT

Indicate method detection limit for contaminants when analyzed, but not detected (e.g., < 1, 10, 42)
List any contaminant detected above the method detection limit
MSCC = maximum soil contaminant concentration
ft. BGS = feet below ground surface
Results must be reported in mg/kg.
mg/kg =milligrams per kilogram

Non-Hazardous Waste Manifest # 46048

Date 12/22/11 Load Number _____
(numbered sequentially as trucks are dispatched)

ENVIRONMENTAL CONSULTANT: Matt Hickey GTA

Contact: Matt Hickey Phone: 410 459-9095 Fax: _____

GENERATOR: Cree Hotels

Address: 311 E 5th Street Charlotte NC 28202 County: Mecklenburg

Contact: Matt Hickey Phone: _____

WASTE ORIGINATION POINT: Complete Address: 311 E 5th Street Charlotte, NC 28202

Class & Type of Contaminate in soil Petroleum

SOURCE OF CONTAMINATION: (ex. UST or other source) Surface Soil

GENERATORS CERTIFICATION OF WASTE CONSTITUENTS: ***In lieu of submitting analytical data (methods 8240 and 8270) verifying that the waste in question does not contain organic constituents other than those which would normally appear in analysis of virgin petroleum product residue, I am submitting this Certificate of Waste Constituents. I certify that I am familiar with the source of contamination of the soil and further certify the source, to the best of my knowledge, contains no contaminants other than that listed above.***

Generators Signature: Matt Hickey Date: 12-23

TRANSPORTER: C.L.R.T

Contact: Lee Shaw Phone: 704 737-4476

As the carrier, I certify that the materials described above being shipped under this non-hazardous materials manifest are properly classified, packaged, labeled, secured, and are in proper condition for transport in commerce under the applicable regulations governing transportation, and I hereby receive this material for delivery to the facility designate.

Carrier Signature: _____ Date: _____

TRUCK #: D4 TAG #: _____ VOLUME: 14.57

TRUCK DRIVER SIGNATURE: _____ DATE: 12-23-11

DESTINATION: Environmental Soils Inc. 910 Crowder Rd, Shelby, NC 28150 Dedicated Land Application Site Permit #SR0300038

I certify that the carrier has delivered the materials described above to this facility, and I hereby accept this material for treatment and/or disposal in a manner that has been authorized by the State of North Carolina.

Facility Signature: _____ Date: 12-23-11

Signature: _____ Date: 12-23-11

Company Name ESI Title: _____

DRAFT

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group
MDL	Method Detection Limit.
RDL	Reported Detection Limit
ND,U	Not detected at the Reporting Limit (or MDL where applicable)
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. (this will only be present on a dry report basis for soils).
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate, used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media
Rec	Recovery.
SDL	Sample Detection Limit
MQL	Method Quantitation Limit
Unadj. MQL	Unadjusted Method Quantitation Limit

Qualifier	Description
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low
V	The sample concentration is too high to evaluate accurate spike recoveries.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit
RDL	Reported Detection Limit
ND,U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference
(dry)	Results are reported based on the dry weight of the sample. (this will only be present on a dry report basis for soils)
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec	Recovery.
SDL	Sample Detection Limit
MQL	Method Quantitation Limit.
Unadj. MQL	Unadjusted Method Quantitation Limit

Qualifier	Description

The remainder of this page intentionally left blank. There are no qualifiers applied to this SDG.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

ESC Lab Sciences is the only environmental laboratory accredited in all 50 states to support your work nationwide from one location. One phone call, one point of contact and laboratory fees as accessible or prepared to handle your work throughout the country. Our capacity and capability from our sample location laboratory is comparable to the collective sizes of the research laboratories in our industry. Our most significant benefit to our "one-level up" design in the design of our laboratory campus. That results conducive to accelerated productivity, decreasing turn around time, and preventing cross contamination, it's protocol, sample integrity. Our focus on proven quality and prompt service allows us to be YOUR LAB OF CHOICE.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call and point of contact - the laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the combined sizes of the network laboratories in size and quality. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and point of service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

LAW Project 30100-8-3917

DRAFT

Dear Mr. Heller:

LAW Engineering and Environmental Services, Inc. (LAW) is pleased to submit, on behalf of 214 North Tryon, LLC, the property owner, this *Report of Notification and Contamination Assessment* for the referenced site. This report has been prepared in compliance with the requirements of the North Carolina Administrative Code (NCAC);Title 15A, Subchapter 2L. Classifications and Water Quality Standards Applicable to the Groundwaters of North Carolina, Section .0105. The purpose of this assessment, that detected the contamination herein described, was to evaluate potential adverse environmental conditions that could potentially impact planned development parameters of the site. The referenced property owner did not conduct or cause to be conducted any activity which contributed to the detected impact to soils and ground water at the site.

This report includes a description of the scope of work performed, the findings of our assessment and our recommendations relative to the detected contamination, based on existing risk-based criteria and planned construction activities. It is our pleasure to provide this information on behalf of 214 North Tryon Street, LLC. Our project personnel are available at your convenience to discuss the contents of this report or other aspects of the project.

Sincerely,

LAW ENGINEERING AND ENVIRONMENTAL SERVICES, INC.

I. PROJECT INFORMATION

The subject site is located in the 200 block of North Tryon Street, northwest of North College Street and between East 5th Street and East 6th Street. A site location map is provided as Figure 1. The site is comprised of properties presently containing a three-story commercial-use building and associated eight-level parking garage (City Fair). The City Fair development is located in the southeastern portion of the block adjacent to North College Street. A Kimbrell's Furniture Store presently occupies an adjacent parcel that is part of the site, and is bounded to the northwest by North Tryon Street. The approximate site boundaries on the block are shown on Figure 2. The Carolina Theatre, a branch of the Mint Museum, and other retail businesses, occupy the remainder of the block that is not part of the site.

The City Fair facilities and the furniture store will be razed for development of an approximately 46-story office tower and associated parking structure. The parcel containing the furniture store is planned to serve as the entrance plaza area to the new facility. According to preliminary design plans, minimal below-grade excavation is expected for the development (up to about 8 to 9 feet below existing grade). We understand that the planned ground floor level for the facility will correspond to the approximate existing grade of College Street (elevation 744 ± ft).

The site is located within the central business district of Charlotte, an area that has been historically developed since the mid-to-late 1800s. Historical information reviewed indicated that the site has been occupied by service stations and auto repair facilities. The current City Fair facility was constructed on the site about 1986. Prior to construction of City Fair, the site had been used for parking. The date of construction of the building occupied by Kimbrell's Furniture store is unknown.

Based on the historical property uses of potential environmental concern (i.e. service stations and auto repair facilities), LAW was engaged to perform assessment to evaluate adverse environmental impact. Potential adverse environmental conditions at the site could have an impact on the planned design parameters relative to proposed foundations and possible excavation work.

DRAFT

2. FIELD EXPLORATION

Between October 9 and 17, 1998, LAW installed ground-water monitoring wells at three locations on the city block containing the site. The drilling locations are shown on Figure 2. Two of the boring/well locations (MW-1/1A and MW-3/3A) are located within the boundaries of the site. A third boring/well location (MW-2/2A) was established to the northwest and upgradient of the site. The locations at which the borings/wells could be installed were limited by the presence of occupied buildings and areas containing underground utilities.

Two borings were advanced at each location using steel hollow-stem augers. The purpose of companion borings at each location was to evaluate the potential presence of contaminants in both the upper portion of the aquifer ("floaters") and at deeper levels where heavier contaminants may have migrated to the top of rock. The down-hole drilling equipment was decontaminated prior to advancing each boring. The drilling and decontamination procedures used at the site are described in Appendix A.

Samples of the subgrade materials were obtained in the deeper of the two borings drilled at each location on the site. Soil samples were collected at approximate 2 to 3-foot intervals. Soil sampling procedures are also described in Appendix A.

2.1 Petroleum-Contaminated Soils

During drilling at the location of MW-1/1A near the corner of North College Street and East 6th Street (see Figure 2), petroleum odors were detected in the soil cuttings and soil samples obtained from the borings. The petroleum odors were noted to begin below the existing concrete surface cover and an underlying remnant pavement layer. Screening of soil samples collected at progressive depths to the top of ground water in boring MW-1A yielded evidence of petroleum contamination in soils. The soil screening procedures are described in Appendix A. The results of soil screening performed in boring MW-1A are shown in the following Table 1:

DRAFT

TABLE 1
RESULTS OF SOIL SCREENING IN BORING MW-1A

Depth, ft	Organic Vapor Concentration Parts Per Million (ppm)
0 – 2.5	72
3.5 – 5	2000+
6 – 7.5	1000+
8.5 – 10	1000+
13.5 – 15	730
18.5 – 20	98
	(below ground-water level)
23.5 – 25	22

A representative portion of the soil sample obtained from the approximate 6 to 10-foot depth in boring MW-1A was collected for laboratory analysis relative to petroleum and other possible contaminants. The soil sample was placed in laboratory-supplied containers, which were then labeled with pertinent sampling information. The soil samples were then placed in an ice-packed cooler and shipped to the appropriate laboratory either by vehicle or overnight courier, depending on the analyses required. Chain-of-custody procedures were maintained.

The soil sample was analyzed for the following parameters:

- Gasoline-Range Petroleum Hydrocarbons (EPA Method 5030/8015)
- Diesel-Range Petroleum Hydrocarbons (EPA Method 3550/8015)
- Volatile Petroleum Hydrocarbons (VPH) by the Massachusetts Department of Environmental Protection (MADEP) Method
- Extractable Petroleum Hydrocarbons (EPH) by the MADEP Method
- Volatile Organic Compounds by EPA Method 8260
- Semi-Volatile Organic Compounds by EPA Method 8270
- Eight Resource and Conservation Recovery Act (RCRA): including arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver

Laboratory analytical results indicated that no elevated levels of metals or semi-volatile organic compounds were detected in the soil sample. Gasoline-range petroleum hydrocarbons were detected at a concentration of 260 parts per million (ppm). Diesel-range petroleum hydrocarbons

DRAFT

were detected at a concentration of 75 ppm. The MADEP methods detected the volatile and extractable constituents and concentrations listed in Table 2 below, which also identifies the North Carolina Department of Environment and Natural Resources (NCDENR) established maximum soil contaminant concentrations (MSCC) for residential property use (reference NCDENR Ground Water Section Guidelines for the Investigation and Remediation of Soil and Ground Water Volume I, dated May 1998):

TABLE 2
MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
VOLATILE AND EXTRACTABLE PETROLEUM HYDROCARBONS ANALYSIS
RESULTS FOR SOIL SAMPLE FROM BORING MW-1A*

Component Name	Concentration Milligrams per kilogram (mg/kg)	NCDENR Maximum Soil Contaminant Concentration (MSCC - mg/kg)
Volatile Petroleum Hydrocarbons		
C5 – C8 Aliphatics	250	939
C9 – C12 Aliphatics	300	9386
C9 – C10 Aromatics	180	469
Extractable Petroleum Hydrocarbons		
C9 - C18 Aliphatics	210	9386
C19 – C36 Aliphatics	Not Detected (ND)	93860
C11 – C-22 Aromatics	ND	Not Listed (NL)
Volatile Organic Compounds		
N-Butylbenzene	4.2	156
Isopropylbenzene	0.95	1564
P-Isopropyltoluene	1.7	NL
Naphthalene	3.5	63
N-Propylbenzene	2.1	156
1,2,4 Trimethylbenzene	1.2	782
1,3,5 Trimethylbenzene	0.94	782

*Note: The soil sample was inadvertently identifies as being from boring MW-2 and is presented as such in the laboratory report.

DRAFT

None of the petroleum hydrocarbon or volatile organic compound concentrations detected exceeds the NCDENR limits for impacted soils in a residential-use setting. The analytical data reports for the soil sample are included in Appendix B. No obvious evidence of contaminated soils was observed during drilling at the two remaining locations evaluated at the site (MW-2/2A and MW-3/3A. No analytical testing was performed on soil samples obtained in those borings.

2.2 Subsurface Conditions

In addition to the three borings drilled for this assessment, LAW drilled several test borings at the site in 1985 to evaluate foundation design conditions for the City Fair development. In 1985, near surface fill soils and possible alluvium was encountered in borings drilled at the site. Most of those materials were reportedly removed during development of the site. No borings were drilled in 1985 at the locations of MW-1/1A and MW-2/2A that are part of this assessment.

Subsurface materials encountered in the three borings recently drilled at the site consisted of fill described as silty sand and sandy clayey silt at the locations of borings MW-1/1A and MW-2/2A. Fill was not encountered in boring MW-3/3A, which was drilled in an underground loading dock area for City Fair. The underlying residual soil strata in the three borings was comprised of variable silt and sand layers that are the result of in-place weathering of parent bedrock.

Partially weathered rock was encountered at depths ranging from about 34 feet (MW-2/2A and MW-3/3A) to 39 feet (MW-1/1A) below existing grade. The partially weathered rock was generally sampled as silty sand and sandy silt. The partially weathered rock was commonly micaceous and contained weathered rock fragments. Refusal to auger penetration, generally defined as the bedrock surface, was encountered a depths ranging from about 35 ft (MW-3/3A) to 69 feet (MW-2/2A) below existing grade. Logs of the borings performed for this assessment are included in Appendix C.

Ground-water at the site was encountered at depths ranging from about 13 to 17 feet below existing grade in borings MW-1/1A, MW-2A, and MW-3/3A between October 12, 1998. Low ground-water inflow was encountered in well MW-2 such that the ground-water level has not risen above about 26 feet below existing grade, more than three weeks after completion of installation.

DRAFT

Topographic maps indicate that a hydrogeologic drainage divide is located generally parallel with North Tryon Street. Based on the topography, the site is located within the Sugar Creek watershed. Sugar Creek flows in a general northeast to southwest direction at its closest point about three-fourths of a mile to the south-southeast of the site. Based on calculations made from determined relative ground-water elevations, the indicated direction of ground-water flow at the site is to the south. These calculations are presented in Appendix D.

2.3 Ground-Water Assessment

2.3.1 Well Installations

Two Type II, ground-watering monitoring wells were installed at each drilling location to evaluate the ground water quality at shallow (MW-1, MW-2, MW-3) and deep (MW-1A, MW-2A, MW-3A) levels on the site. The ground-water monitoring well construction parameters are described in Appendix E. The shallow wells extended to depths ranging from about 18 feet (MW-3) to 38 feet (MW-2) below existing grade. Well MW-2 was installed deeper due to low ground-water inflow experienced while drilling that boring. Well construction records are included in Appendix F.

The deeper Type II wells (MW-1A, MW-2A, MW-3A) were installed at/or near the top of bedrock (auger refusal depths). These deeper wells were installed at depths ranging from about 34 to 66 feet below existing grade, depending on the depth of auger refusal. Well construction records are included in Appendix F.

The ground-water level in each of the wells was allowed to stabilize for a period of approximately 24 hours prior to well development. The ground-water level in each well was then measured using an electronic water level indicator. The volume of water in each well was calculated, based on the measured water level and the well's geometry. The wells were developed by bailing water and monitoring the pH and conductivity. Well development was generally considered adequate once a relatively stabilized pH and conductivity reading was recorded. The bailed water was also observed for a reduction in turbidity. The total well volumes of water removed from each well and correlative estimated gallons of water are illustrated in the following Table 3, in addition to other pertinent well/ground water information:

DRAFT

TABLE 3
GROUND-WATER MONITORING WELL DEVELOPMENT RESULTS

Well No.	Total Depth of Well (ft)	Depth to Ground Water (ft)	Approximate No. of Well Volumes Removed	Approximate Gallons of Water Removed
MW-1	25.2	16.2	15	23
MW-1A	62.3	16.6	15	116.5
MW-2	38	30.8	6.7	8.2
MW-2A	65.8	17.4	12	98.4
MW-3	17.6	12.9	15.2	12.2
MW-3A	33.8	13.2	12	42

Water collected from well development and sampling was placed in 55-gallon steel drums, which are presently stored at the site, pending proper disposal.

Approximately 48 hours following development, which allowed for ground-water recharge, the wells were purged of a minimum three volumes and sampled. The ground-water samples were placed in laboratory-supplied containers. The containers were then labeled with sampling information and placed in an ice-packed cooler. The water samples were shipped for overnight delivery to LAW's National Laboratory in Pensacola, Florida for analytical testing. Chain-of-custody procedures were maintained.

2.3.2 Laboratory Analysis of Ground-Water Samples

The ground-water samples collected from the wells at the site were analyzed for the following parameters:

- Halogenated and Aromatic Volatile Organic Compounds by EPA Methods 601 and 602, including typical petroleum constituents benzene, toluene, ethyl benzene, xylenes (BTEX), ethylene dibromide (EDB), isopropyl ether (IPE) and methyl-tert-butyl ether (MTBE)
- Semi-Volatile Organic Compounds by EPA Method 625
- 8 RCRA Metals: arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver

DRAFT

The laboratory analytical results indicate that no elevated metals concentrations or semi-volatile organic compounds were detected in the ground water samples collected from the site. Detected volatile organic compounds and their correlative concentrations in the ground-water samples obtained at the site are illustrated in Table 4 below, relative to the individual wells and the maximum allowable concentrations in ground water established by the NCDENR:

TABLE 4
GROUND WATER ANALYTICAL RESULTS

Well No.	Volatile Organic Constituent Detected	Concentration Detected (Parts Per Billion)	NCDENR Maximum Allowable Concentration[1]
MW-1	Methylene Chloride	19.5	5
	Tetrachloroethene	3.48	0.7
	Isopropyl Ether	3.24	
	Ethylene Dibromide	5.29	4.0×10^{-4}
	Benzene	3.71	1
	Toluene	3.15	1000
	Ethyl Benzene	4.47	29
	Xylenes	7.48	530
MW-1A	Chloroform	2.20	0.19
	Dichlorodifluoromethane	7.04	1400
MW-2	Chloroform	1.42	0.19
MW-2A	Chloroform	2.40	0.19
	MTBE	1.24	200
MW-3	None Detected (ND)		
MW-3A	Chloroform	1.61	0.19

[1]North Carolina Administrative Code (NCAC), Title 15A, Subchapter 2L – Classifications and Water Quality Standards Applicable to the Groundwaters of North Carolina
*Constituents and concentrations in shading indicate regulatory levels exceeded

The laboratory analytical data reports for the ground water samples obtained at the site are included in Appendix G.

DRAFT

3. CONCLUSIONS AND RECOMMENDATIONS

3.1 Petroleum-Contaminated Soils

Petroleum contaminated soils were encountered in the northeastern portion of the site at the location of MW-1/1A (see Figure 2). The source of the petroleum contamination is generally unknown, although historical information indicated that the corner of North College Street and East 6th Street was formerly occupied by an auto repair facility that operated underground storage tanks. According to analytical testing, the levels of petroleum contamination in the soils do not exceed the Maximum Soil Contaminant Concentrations (MSCC) listed for a residential-use property, considering the risk-based criteria established for petroleum release sites. It is our opinion that application of the residential MSCC action levels would be appropriate for the subject site, with respect to the planned site use and an anticipated low regulatory priority ranking of the site. Since the majority of the site is planned to be developed with commercial buildings and associated sidewalk areas, potential exposure of contaminated soils to the public will be limited (only foundation excavations are planned below existing grade for development of the site in the area containing contaminated soils). The encounter and handling of contaminated soils during foundation excavations is addressed in Section 3.3. We do not consider that further assessment or remedial actions are required with regard to the petroleum-contaminated soils detected in that limited area of the site.

3.2 Ground Water

Ground water at the site was found to be impacted by low levels of petroleum constituents and selected volatile organic compounds, as described in Section 2. Based on the information obtained from the shallow and deep wells installed at each drilling location on the site, no evidence of additional deeper heavier contaminants was found. The concentrations of selected petroleum and VOC constituents generally slightly exceed the State ground-water quality standards (15A NCAC 2L).

Petroleum-impacted ground water was detected only at the location where petroleum contaminated soils were encountered in the upper unsaturated zone at the location of well MW-1/1A in the northeastern portion of the site (between about 25 and 50 feet below ground surface).

DRAFT

The petroleum contamination in ground water does not appear to extend to a significant depth, according to information obtained from deeper well MW-1A.

Volatile organic compounds (VOCs) were detected in ground water at all three locations explored on the site. No elevated VOC concentrations were found at depth in any of the wells. A potential existing or historical on-site source for the VOCs is unknown.

The subject site is located in a present and historically urban development setting characterized by closely situated buildings and predominantly paved streets and parking areas. Limited areas exist where surface soils are exposed. No known potable water-supply wells, surface-water features or surface-water intakes are located in close proximity to the site. The site is served by the municipal water supply in addition to the storm sewer and sanitary sewer systems. There is no known planned future use of ground water at the site or surrounding area.

It is our opinion that the relatively low concentrations of the constituents and the absence of potential receptors (i.e. water wells or surface water features) for contamination in ground water at the site would be conducive to a low priority listing designation on the basis of existing risk-based criteria. Since there is no known existing or historical on-site source for the non-petroleum VOCs, it is additionally our opinion that further assessment by the existing property owner would not be warranted.

Based on the above-described rational, we petition on behalf of 214 North Tryon, LLC, that the site be designated as low priority and that no further action be required relative to assessment and remediation of the low levels of contaminants detected in ground water.

3.3 Foundation Excavation Dewatering

Based on geotechnical engineering studies performed for the site, the preferred foundation system for the development is drilled caissons. The bearing depths necessary for the drilled caissons will require limited dewatering during excavation and construction of the foundations. Information obtained from our study described herein indicates that the ground water removed from the foundation excavations may contain low levels of VOC constituents.

DRAFT

The projected duration of foundation excavation and installation at the site is approximately three months. The daily volume of ground-water removal is unknown; however, is not expected to exceed more than a few hundred gallons. Our preliminary discussions with the Charlotte/Mecklenburg Utility Department (CMUD) have indicated that securing a temporary permit for discharge to the sanitary sewer for the duration of the project may be feasible. Based on this information, it is evident that the levels of constituents in ground water do not pose a significant risk to the water quality. This determination similarly supports our assessment that this is a low priority site requiring no further action at this time.

Drilling, Decontamination Soil Sampling and Field Screening Procedures

DRAFT

DRILLING, DECONTAMINATION, SOIL SAMPLING, AND FIELD SCREENING PROCEDURES

A truck-mounted Central Mine Equipment (CME) Model 75, hydraulically driven hollow-stem auger drilling rig was used to perform the borings drilled at the site. The well borings at the site were advanced by mechanically twisting approximately 8-inch O.D. and 4.25-inch I.D. steel, hollow-stem augers into the subgrade materials. Each auger flight was decontaminated prior to introduction into the subgrade at each boring location by rinsing off adhereing soil particles and possible contaminants using a high-pressure hot water sprayer.

Soil samples were obtained at selected depths in each boring and logged relative to soil types, stratigraphy, and for possible field screening and laboratory testing. The soil samples were obtained by mechanically driving into the subgrade materials, an approximately two-foot long steel, hollow split-tube sampler. Once penetration equating to the length of the sampler was attained or the maximum penetration achieved, depending on the density/consistency of the subgrade materials, the sampler was removed from the borehole. The split-tube sampler was then dismantled to collect the soil sample. The split-tube sampler was decontaminated prior to each sampling event by washing in a non-phosphate laboratory-grade detergent and water solution and then rinsing with potable water.

Selected soil samples obtained at the site were screened in the field for volatile organic vapors, an indicator of possible contamination using a Foxboro 128 Flame Ionization Detector organic vapor analyzer (OVA). Each soil sample collected for field screening was placed in a new sealable plastic bag. The plastic bag was placed in a relatively warm location for a period of approximately 10 to 15 minutes to allow for volatilization of vapors. The intake probe of the OVA was then placed into the headspace of the bag to absorb the free-floating organic vapors emanating from the soil sample. The organic vapor concentration registered by the detector was then recorded.

Ground-Water Monitoring Well Construction Parameters

DRAFT

GROUND-WATER MONITORING WELL CONSTRUCTION PARAMETERS

The Type II ground-water monitoring wells were constructed of 2-inch diameter Schedule 40 polyvinyl chloride (PVC) casing with threaded, flush joints. The bottom portion of the wells consist of manufactured well screen containing 0.01-inch openings. The screened portions of the wells varied from about 5 to 20 feet in length.

Washed sand was placed in the surrounding annular space between the screened portion of the well and the borehole wall, to a height of about two feet above the screen. An approximate one to two-foot bentonite clay seal was then placed on top of the sand to minimize potential migration of surface runoff from the upper annulus into the screened portion of the well. The remainder of the annular space between the well and the borehole above the screen was filled with a neat cement grout. A lockable expanding cap was placed at the top of the well to minimize potential unauthorized intrusion into the well. A bolt-down steel cover placed flush with existing grade completed the well construction. Ground-water monitoring well construction diagrams and construction records are included in Appendix F.

GW Incident No. (To Be Assigned)
Mecklenburg County, N.C.

DRAFT

Dear Mr. Beuley:

On November 19, 1998, the Groundwater Section received an environmental assessment report for the above referenced site. This report was forwarded to the Underground Storage Tank Section for review on December 7, 1998. On March 3, 1999, the report was returned to the Groundwater Section. The report has been reviewed and will remain on file with the Groundwater Section.

The environmental assessment report identified low levels of petroleum contamination in soil and low levels of benzene and tetrachloroethene in shallow groundwater. Based on the location of this site and the absence of water supply wells in the area, it has been assigned a low priority ranking. Due to the low priority ranking, the Groundwater Section will not conduct an investigation at this site in the foreseeable future to identify the party responsible for the contamination. If a responsible party is identified in the future, it is unlikely that they will be required to actively remediate soil and groundwater contamination at the concentrations which have been identified to date.

If you have any questions about this information, please call me at (704) 663-1699, ext. 241.

Sincerely,

Matt Heller, P.G.
Hydrogeologist

Dear Mr. Adkins:

On November 19, 1998, the Groundwater Section of the Mooresville Regional Office of the Division of Water Quality received the subject report for the above-referenced site. Since the majority of the reported contamination at the site is thought to be related to underground storage tanks, the report will be forwarded to Alan Schiff with the Underground Storage Tank Section for review.

Should you have any questions, please call Alan Schiff or me at 704.663-1699.

Jeffrey A. Jager – Associate Consultant

Education:

BS Management, Clarkson University, Potsdam, NY
MS Environmental Technology, NY Institute of Technology, Old Westbury, NY

Training/Licenses/Registrations:

New York State Department of Labor Asbestos Inspector
North Carolina Asbestos Accreditation
South Carolina Asbestos Accreditation
North Carolina Lead Inspector

Summary of Professional Experience:

Mr. Jager has performed over 900 site inspections and written over 1,800 environmental site assessment reports in over 24 states. Mr. Jager has conducted inspections for Wall Street firms, national, regional and local banks, insurance companies, telecommunications companies, developers and government agencies. Mr. Jager has performed ESAs, mold/indoor air quality surveys, asbestos surveys, lead-based paint surveys, radon surveys, NEPA studies, soil resistivity studies, Phase II investigations, and drinking water quality surveys. Mr. Jager has managed portfolios of environmental site assessments ranging in size from six properties to 162 properties.

Select ESA project experience for Mr. Jager includes:

- **Asbestos Abatement Oversight, Bridgeport, CT -** Mr. Jager assisted in the project oversight of an abatement project at the Remington Firearms factory that was to be razed.

- **Fairmont Hotel, New Orleans, LA** – This project consisted of an ESA of a hotel property while working with a professional engineer. Study involved the hotel's expansion into a neighboring office building.

- **Portfolio, 25 sites between Morgantown, WV and Ft. Lauderdale, FL** – Mr. Jager managed this portfolio of 25 apartment complexes. He visited ten sites and wrote ESA reports for all 25 complexes.

- **Southbridge Towers, New York, NY** – This project included a residential apartment complex consisting of three 29-story apartment buildings and four 10-story apartment buildings. In additional to the ESA limited asbestos sampling accompanied the site walk through.

- **Tax Lien Portfolio, 162 properties, New York, NY** – Mr. Jager managed a portfolio of 162 tax lien properties throughout the five boroughs of New York City, including site visits and all ESA reports. The portfolio was completed in five weeks.

DRAFT

Phillip A. Hoeksema

National Client Manager, Due Diligence

EDUCATION

- B.S. - Geology, Illinois State University, 1995

CERTIFICATIONS

- ASTM Personal Certificate for Vapor Encroachment Condition Screening (VECs)

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Hoeksema has over 25 years of experience in the due diligence industry. He has performed and managed thousands of environmental site assessments for multifamily residential, commercial, and industrial properties throughout the continental United States and Caribbean. In addition to due diligence assessments, Mr. Hoeksema has managed and performed RCRA Facility Investigations, closure of LUSTs, LUST reimbursements, and negotiated closure of environmentally impacted sites under the Illinois Environmental Protection Agency (IEPA) Site Remediation Program and Indiana Department of Environmental (IDEM) Voluntary Remediation Program.

PROJECT EXPERIENCE

Project experience for Mr. Hoeksema includes:

- **CenterPoint Properties, Indianapolis, IN** - Environmental Site Assessments and follow-on subsurface investigations of an industrial real estate portfolio.

- **State Superfund Site, Addison, IL** - Assisted in finding a cost-effective cleanup technology as an alternative to off-site soil disposal for an investment casting facility. The site history included degreasing solvents that were discharged to a surface impoundment over several years and subsequently resulted in the contamination of soil and groundwater. Low Temperature Thermal Desorption technology was used to remediate over 6,000 tons of soil contaminated with chlorinated solvents and a pump and treat system was utilized to remediate the contaminated groundwater and obtain closure through the IEPA.

- **Industrial Waste Cleanup Facility, Lake Calumet, IL** – Team member conducting on-site activities to determine if historical operations had resulted in releases to soil and/or groundwater and assessing the need for remediation. Consisted of the installation of approximately 170 soil borings and groundwater sampling in Level C protective equipment.

- **Chemical Manufacturing Facility, Hammond, IN** – This property was vacant and distressed after historically being used as a chemical manufacturing facility by an international chemical company. Managed the project from conducting the Phase I ESA and Phase II investigations through to entering the site into the voluntary cleanup program and obtaining the no further remediation letter. This site was subsequently developed into a retail shopping center.

DRAFT

- **Multifamily Apartment Complex, Colorado Springs, CO** – Managed the Phase I ESA which identified a former methamphetamine lab in one residential unit within the complex. Developed the sampling plan which identified methamphetamine chemicals of concern above the mandated limit on the floors, walls, ceilings and countertops within the unit, and subsequently the remediation and restoration of the unit.

- **Richards Gebaur Air Force Base, Kansas City, MO** - Conducted the Phase I ESA and monitoring of cleanup of several areas of concern across the base as part of the redevelopment.

- **Senior Living Facilities, multiple locations across the US** – Provided due diligence project management of a portfolio of senior living facilities.

- **Port of Will County, Joliet, IL** – Performed Phase I ESA of an industrial facility with multiple areas of concern, including mine operations, former USTs and LUSTs, radiation issues due to disturbance of rocks with high levels naturally occurring radium, and existing groundwater contamination. The property was purchased, no further remediation letters were obtained, and the property was repurposed for additional industrial use.

- **Multifamily Apartment Complex, Birmingham, AL** – Provided project management and review for a Phase I ESA which was identified with a chlorinated solvent plume from an off-site dry cleaner which extended over 1,000 feet and onto the subject property. Several vapor encroachment and vapor intrusion studies were undertaken with funding approved by the Alabama Dry Cleaner Fund.

DRAFT

Eugene A. Belli, REPA, CHMM

Executive Vice President

EDUCATION

- MS - Environmental Science, New Jersey Institute of Technology, 1996
- B.A. - Geography, Rutgers University, 1986

CERTIFICATIONS

- Certified Hazardous Material Manager, Institute of Hazardous Material Managers
- Registered Environmental Property Assessor, National Registry of Environmental Professionals
- New York State Asbestos Inspector/Management Planner, New York State Dept of Labor, Certification # 01-22084
- USEPA Asbestos Building Inspector, Certification #62360
- USEPA Asbestos Management Planner, Certification #62363

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Belli has over 39 years of experience in the due diligence industry, including serving as an environmental manager of a regional and international bank. He has managed over 10,000 environmental site assessments for residential, commercial, and industrial properties throughout the continental United States. Many of the assessments completed on industrial sites were performed in accordance with New Jersey's Industrial Site Recovery Act (formerly known as the Environmental Cleanup Responsibility Act [ECRA]). In addition to due diligence assessments, Mr. Belli has managed and performed compliance audits, Underground storage tank management and closure activities, remedial investigations, and cleanups.

During Mr. Belli's banking and consulting career, he has been intimately involved with bulk and portfolio sales as well as conduit lending. Mr. Belli is a registered Environmental Property Assessor, a certified Hazardous Materials Manager, An AHERA Building Inspector/Management Planner and previously serviced as a licensed New Jersey Underground Storage Tank Subsurface Evaluator.

PROJECT EXPERIENCE

Project experience for Mr. Belli includes:

- Fleet Bank: Summit Bank Portfolio - Environmental Site Assessments and desktop reviews of 375 bank branches located in NJ, NY and CT.
- JPMorgan Chase: Centro Watt Portfolio - Environmental and property condition assessments of 292 retail shopping centers nationwide, conducted in four weeks.
- Merrill Lynch: LaQuinta Hotel Portfolio - Conducted 475 environmental and property condition assessments within 25 days. Properties were located throughout the United States.
- Wells Fargo Foothill: Uhaul Portfolio - Completed desktop reviews of prior environmental reports, historical record reviews and database reports for 950 properties. Risk analysis of each property was performed with information summarized in an access database. Calculated worst case environmental liability loss.

DRAFT

- GHM Military Housing- Navy Northeast Housing Project: Northeast Region of United States - Conducted Phase I Environmental Site Assessments and subsurface investigations at 10 US Navy installations in the northeast to support the privatization of base housing.
- GHM Military Housing- Navy Southeast Housing Project: Southeast Region of United States - Conducted Phase I Environmental Site Assessments and subsurface investigations at multiple US Navy installations in the southeast to support the privatization of base housing.
- Andrews Air Force Base – Underground Storage Tank Audit and Upgrade Program - Performed compliance audits on the underground storage tank systems at Andrews Air Force Based and recommend and oversaw system upgrades. The evaluation included the tanks at the Air Force One Presidential Complex.
- Federal Express – Underground Storage Tank Compliance and Upgrade Program - Developed and managed a national underground storage tank compliance program consisting of 235 facilities throughout the country. Program consisted of testing, installation of corrosion protection, leak detection, spill/overfill devices and permitting.
- US Navy – Lead Risk Assessment Survey - Managed and directed a lead based paint survey of three T-AKE Class ships for the US Navy. Ships were in port in Guam, San Francisco, and Washington State. The ships consisted of the USNS Wally Shira, USNS Amelia Earhart and USNS Carl Brashear.
- Alpert and Alpert – Brownfield Redevelopment Project under New Jersey's Industrial Site Recovery Act - Performed soil, groundwater and indoor building material testing under New Jersey's ISRA Program. Conducted remedial action and designed building interior decontamination to allow the property to be converted to residential use.
